## WELCOME TO GIRO SNOW 2021

It's a good time to be here. Giro has always maintained a strong focus on enhancing the feeling of freedom and independence that are at the core of a rider's experience. It's been central to the brand since we were founded in Santa Cruz, California in 1985, and that philosophy is more relevant today than ever.

The product line unveiled in this catalog is a standout collection of the best helmets and goggles in Giro's history. We continue to lead the way in head protection—leveraging our industry-leading helmet test lab, what we call the Dome—and we now offer the most compelling range of goggles on the market. By combining leading technologies like VIVID with modern silhouettes and a wide range of graphics, we're sure you'll agree that Giro has never looked (or performed) better.

As a Giro dealer you understand that getting out on snow is more than just a fleeting hobby or a passing fad, it's the best part of a great life. We're in this business together. Last year was a banner season for Giro and we're looking forward to continuing this momentum with you through 2021.

Christian Haller, LAAX Switzerland

VIVA LA VIVID

VIVA LA VIVID

**VIVID IS GLOBALLY EMBRACED  
AS THE LEADING LENS TECHNOLOGY.**

The advantages are clear—enhanced contrast, reduced eye strain, improved reaction time, and boosted confidence. Of course it's fresh, new, and bold. And, yes, it's shaking up the goggle business and propelling Giro into the lead. But we believe VIVID is much more than a lens technology. To the Giro staff, to our team riders, to our friends, to our families and to our dealer partners Viva la VIVID has become a rallying cry. At the park, in the backcountry, and beyond, Viva la VIVID is a way of life. So get out and be bold this season. Shred with confidence, and VIVA LA VIVID!

# FREE YOUR EYES WITH VIVID

## ENHANCE CONTRAST AND BOOST CONFIDENCE

VIVID is a patented lens technology—developed by Giro in partnership with ZEISS Optics—that improves the visual experience on snow by enhancing contrast and definition. VIVID reduces eyestrain, improves reaction time, boosts confidence, and delivers precise vision without color over saturation. VIVID effectively manipulates light by letting in contrast-enhancing blue light, while blocking harmful UV light (referenced in this diagram).

- EXV+ LENS
- EXV LENS
- TRADITIONAL LENS

## INTRODUCING EXV+

### A NEW LENS CURVATURE DELIVERS AN UNPARALLELED FIELD OF VIEW

Giro set the standard when we introduced the first EXV (Expanded View) goggle, the Onset. Now we're excited to introduce the next breakthrough—the all new Contour goggle with EXV+. The Contour features a proprietary, semi-spherical lens curvature (6 x 1.5-degrees) that allows a wider field of view than ever before.

A common misconception is that larger frames offer a wider field of view. Although counterintuitive, your peripheral vision is more often limited by the goggle's frame and lens shape than its size. Our lab testing has proven that Giro's EXV models outperform some of the largest fishbowl shapes on the mountain. Now Contour, with EXV+, leads the way by a longshot, despite its stealthy silhouette. The difference is clear: one run in Contour and you'll realize what you've been missing.

# CONTACT

CLICK IT & RIP IT

The breakthrough design of the Contact™ goggle makes it easy to adapt instantly to changing weather and light conditions. The Snapshot Magnetic Lens Interchange System sets a standard in fast, accurate and secure lens interchange by utilizing a shutter button-release and locking mechanism. Self-locating magnets guide and hold the lens securely into place in this sleek, semi-frameless design. The Contact offers an outstanding field of view and includes two premium VIVID lenses with Optics by ZEISS®.

INTRODUCING

# THE CONTOUR GOGGLE

Thought, consideration, and an acute attention to detail have been put into the Contour goggle, brand new for 2021 and designed specifically for the core rider. The sleek and stylish Contour lacks any concern for fogging, offers best-in-class clarity, features seamless compatibility with your helmet, and offers a plush and comfort feel against your face—making it hit all the “must have” marks that your premium go-to goggle has. Most notable is the Contour’s improved EXV+, which delivers the largest field-of-view in its class so you can truly expand your vision on the mountain. Pair that with the quick-change lens system, and tried-and-true VIVID technology, and you have yourself an eye-opening goggle that you’re sure to enjoy each snowy run after the next.

2021

# CONTOUR NEW

SEE IN STYLE

With a new toric lens shape and VIVID lenses with optics by ZEISS®, you'll be able to see as great as you look with the Contour goggle. The Contour features the largest field of view in its class while offering a new lens shape that's been developed with ZEISS® optics. To see all the features on the mountain in total clarity, the Contour's Expansion View Technology + and VIVID lenses allow you to spot your landings and take-offs with ease. The Contour also boasts an EVAK vent system so you don't have to worry about fogging, a bonus low light VIVID infrared lens, and a super-efficient quick-change lens system.

GIRO

## GIRO X POW

We've been collaborating with POW for four years and our enthusiasm continues to grow. Environmental consciousness is important and we're proud to work with the leading climate advocacy group for the winter sports community. This year, a portion of the proceeds from the Giro x POW Grid MIPS helmet and Axis goggle will help support POW's efforts of utilizing education, political advocacy, and community-based activism to reach millions and foster powerful change. If you're just as vocal about environmental consciousness, the Giro x POW collab is the helmet and goggle combo to ride in this winter.

POW

# AXIS

BEYOND BOLD

The Axis™ frameless design features an elegant Quick-Change lens system and clean, bold style. Four self-locating magnets assist in lightning-fast lens replacement and four snap pins keep the lens securely locked in place. The fit accommodates a wide range of face shapes while boasting an impressively wide EXV field of view. The Axis includes two of the best lenses in the business with premium VIVID lenses with Optics by ZEISS®.

# OPTIMIZED LENS TINTS

Giro offers a full assortment of performance-engineered polycarbonate lenses in a wide range of lens tints to enhance your vision in conditions ranging from bluebird to dark and stormy. Every lens filters 100% of harmful UV, and features durable coatings that resist fogging and scratches. Select lens tints include flash mirror coatings that tune light transmission for optimal vision.

ALL MOUNTAIN HELMETS

# MARKET-LEADING BRAIN PROTECTION

## MIPS SPHERICAL TECHNOLOGY SETS THE STANDARD

MIPS Spherical is a refinement and evolution of the Multi-Directional Impact Protection System (MIPS). With this sophisticated design, two layers of EPP foam fit together like a ball-and-socket. This system helps protect the brain from rotational energy by allowing up to 10- to 15- millimeters of relative motion between the helmet and head during the first milliseconds of an impact.

**MIPS Spherical offers several notable benefits:**

- Reduces linear & rotational impact energy
- Addresses high-speed & low-speed impact energy
- Provides unobstructed, free airflow
- Offers plush comfort

INTRODUCING

2021

# THE GRID MIPS HELMET

At only 400 grams, the new Grid has been made to lighten the load whether your adventure includes ski touring, riding in the backcountry, rallying through groomers at the resort, or adding to your bag of tricks in the park. Its key differentiator is how noticeably lightweight it is. Also boast-worthy is the new ear pad interface, which has also been developed into the line for increased fit, comfort, and enhanced auditory experience. Plus, riders can rely on the benefit of a warm and quick-drying Polartec® liner and as well as our innovative MIPS Spherical technology, there to add an additional layer of protection in rotational impacts.

NEW

# GRID MIPS NEW

FRESH TRACKS

Get ready to experience one of the lightest helmets with the Grid MIPS®. Whether you're splitboarding, ski touring, or just taking full advantage of some corduroy, a lightweight helmet that's durable and comfortable makes the turns that much more enjoyable. But you don't have to go off the grid to reap all of its benefits. You'll notice its extremely lightweight construction allows you to make powdery turns and then tour back to the top without being weighed down. When you're feeling the burn and things start to heat up, easily control your temperature with the thermostat control and stack ventilation. The Grid also features MIPS Spherical technology, which reduces rotational energy during certain impacts for an additional level of confidence. Plus, you'll stay extra comfortable thanks to its Polartec® lining that dries quickly and provides unparalleled breathability. Buckle up and drop in in the Grid MIPS.

# RANGE MIPS

FIT IS FUNCTION

The Range™ MIPS is the first helmet to boast a truly integrated, custom fit at the turn of a dial. By utilizing a two-piece shell and a durable yet semi-flexible design—what we call Conform Fit Technology—this helmet expands and contracts, adapting to every rider's individual head shape. The result is not only unsurpassed comfort, but also the sleekest, lowest profile helmet in Giro's history. High-end performance and functional features like MIPS technology, Thermostat Control Adjustable Venting, an integrated POV camera mount, and Fidlock® magnetic buckle closure complete this leading-edge design, making it one of our most popular helmets and a Giro team rider favorite for freeride pursuits.

### FEATURES

- POV camera mount included
- Fidlock® magnetic buckle closure
- Polartec® Power Grid™ padding
- Compatible with aftermarket Giro audio systems by Outdoor Tech
- Seamless Compatibility with all Giro goggles
- Compliance: CE EN1077

# RATIO MIPS

TUNED RIGHT

The Ratio™ MIPS® is a no-nonsense helmet that boasts many of the features found on Giro's premium helmets offered at a more accessible price. Beneath the sleek silhouette, you'll see how easy it is to adjust the fit via the In Form™ Fit System, while Thermostat Control™ venting allows you to control airflow. The Ratio also comes compatible with aftermarket audio systems by Outdoor Tech, so you can listen to your favorite beats as you bomb down the mountain. Last but not least, the Giro Ratio is available with MIPS—which offers more protection in certain impacts by redirecting impact energy.

NEW

INTRODUCING

# THE ORBIT MIPS HELMET

Convenience is everything—especially on the mountain. The new Orbit MIPS helmet and shield have been carefully crafted so that the visor is very easy to slide up and down. The Orbit MIPS's VIVID Shield with Optics by ZEISS® can simply be pulled forward from the top of the helmet, out and over your face, and seamlessly tucked back in. With this efficient design, less wind will get inside and it offers an excellent fit. Riders will also appreciate the vent slider button to regulate internal temps, the fast-drying and warm Polartec® Powergrid™ padding, and the extra confidence knowing that the Orbit features MIPS Spherical technology, which helps protect the brain from rotational energy.

2021

# ORBIT MIPS NEW

THE ALL-IN-ONE LOOK

The Orbit MIPS® shield helmet offers comfort on the mountain while boasting a futuristic look with modern performance features. You can easily pull the shield out and over the helmet and back down without any fuss—a great option for those who wear glasses. You're also sure to appreciate the VIVID lens that's seamlessly integrated with the helmet, MIPS Spherical technology which aids in the reduction of rotational energy during impacts, and Thermostat Control so you can manage the temperature within.

RACE HELMETS

# AVANCE MIPS

MOVE FORWARD

The Avance™ MIPS® is the most advanced helmet in Giro's history. Its construction features our most sophisticated form of MIPS, MIPS Spherical. MIPS Spherical redirects impact energy with two separate layers of EP-Premium foam and eliminates the plastic slip plane. Other premium details of the Avance MIPS include the TeXtreme® carbon shell, the EP-Premium Line, and the X-Static® anti-microbial padding. The carbon shell boasts an intelligent shape with material added strategically to the areas where gate impacts commonly occur, what we refer to as Hammerhead Design. Don't just take it from us. The U.S. Ski Team and our sponsored racers also confirm how the Giro Avance MIPS is more comfortable, quiet, and lightweight than anything they've experienced.

### FEATURES

- X-Static® anti-microbial padding
- Travel bag included
- Chinbar compatible
- \*accessory sold separately
- Seamless Compatibility with Giro goggles

Compliance:  
ASTM 2040  
CE EN1077 Class A

# STRIVE MIPS

LIVE FOR SPEED

When your thoughts are consumed by speed and you live for victory, this is your helmet. The Strive™ MIPS® borrows the same aerodynamic silhouette from Avance™ MIPS but utilizes a stiff, fiberglass shell with an EPP liner that dissipates impact energy. You'll also find MIPS—which can provide more protection in certain impacts by redirecting impact energy—along with chinbar compatibility for slalom sessions. The chinbar (sold separately) boasts easy, tool-free installation and adjustability to get the angle just right. With three shell sizes and six pad sets available, you're sure to find the perfect fit.

# LEDGE SL MIPS

SPEED STARTS HERE

The Ledge SL™ MIPS® is the ultimate slalom helmet and versatile. Featuring Hard Shell Construction, the In-Form Fit System, and a removable chinbar, the Ledge SL MIPS has everything needed to attack any slalom course on the planet. The Ledge SL shows its edge when the chinbar is installed by protecting racers against gate impacts and against angled impact thanks to MIPS (Multi-Directional Impact Protection System). For the off days, remove the chinbar, and you have fully functioning everyday helmet for cruising, park riding, and freeriding.

# THE ENVI MIPS HELMET

The importance of lightweight gear can't be dismissed, and you'll immediately notice just how lightweight the Envi MIPS feels, whether you choose to spend your day on snow heading into the backcountry, going down your favorite runs at your local resort, or hitting up that urban spot you've always wanted to cross off your list. Weighing in at only 400 grams, you'll love how the Envi feels (or lack of feel) when you're threading the needle. The new ear pads interface has also been developed into the line for increased fit, comfort, and enhanced auditory experience. Plus, riders can rely on the benefit of a warm and quick-drying Polartec® liner and MIPS Spherical, the latest generation of protection that adds an additional layer of protection in rotational impacts.

NEW

# ENVI MIPS NEW

LIGHT WEIGHT MEETS LUX

Get ready to experience one of the lightest helmets with the Envi MIPS®. Whether you're splitboarding, ski touring, or just taking full advantage of some corduroy, a lightweight helmet that's durable and comfortable makes the turns that much more enjoyable. You'll notice its extremely lightweight construction allows you to make powdery turns and then tour back to the top without being weighed down. When you're feeling the burn and things start to heat up, easily control your temperature with the thermostat control and stack ventilation. The Envi also features MIPS Spherical technology, which aids in the reduction of rotational energy during certain impacts for an additional level of confidence. Plus, you'll stay extra comfortable thanks to its Polartec® lining that dries quickly and provides unparalleled breathability. Buckle up and drop in in the Envi MIPS.

# STELLAR MIPS

THE STARS ALIGN

The Stellar™ MIPS® is our premier low-profile women's helmet that'll leave you hooting and hollering as you comfortably soar at speed. For a personalized fit, it utilizes integrated Conform Fit Technology—a two-piece outer shell that hugs the head with the turn of a dial. The low-profile Stellar MIPS also comes fully loaded with high-end performance and safety features including our Multi-Directional Impact Protection System (MIPS) for an additional layer of protection, adjustable venting so you can control airflow, an integrated POV camera mount for documenting adventures, and a Fidlock® magnetic buckle closure that allows you to stay focused on the pursuit of powder or perfect groomers.

## FEATURES

# STRATA MIPS

LIGHTWEIGHT & LUXURIOUS

The Strata™ MIPS® gets its good looks and low-profile styling from Giro's top-of-the-line Stellar™ MIPS, but on the inside, it features an advanced Hybrid Construction that blends a durable Hard-Shell ventilated upper with a lightweight In-Mold lower with in-molded sidewalls for added protection and style. The Strata MIPS also offers the In Form™ 2 Fit System with custom quick-fit Vertical Tuning and the protection of MIPS—the Multi-Directional Impact Protection System. Strata MIPS extras include adjustable enhanced venting and an integrated POV camera mount all in a durable, lightweight package.

## FEATURES

# TERRA MIPS

SMOOTH LINES, SHARP STYLE

The Terra™ MIPS® helmet delivers on the promise of an ultra-lightweight, perfect fit in a sleek modern helmet design, so you can focus on smooth lines and sharp style. The streamlined helmet profile is achieved through the Passive Aggressive Venting system. This discrete, yet powerful system automatically manages airflow and temperature during in-motion or standing static as you wait for your friend at the bottom of the run. The Terra MIPS also features lightweight construction and the dialed in fit of the In-Form 2 Fit system for a barely-there feel. Last but not least, this helmet comes equipped with the MIPS, the Multi-Directional Impact Protection System, which provides more protection in certain impacts.

## FEATURES

NEW

INTRODUCING

# THE ARIA MIPS HELMET

With the new Aria MIPS, riders can enjoy a perfect fit, clean style, and a super smooth visor mechanism. The VIVID Shield with Optics by ZEISS® enhances contrast and boosts confidence, and the new design helps keep the wind out from underneath while offering a comfortable feel on your face. In addition to a better feel, the Aria features MIPS Spherical technology, which help protects the brain from rotational energy for more confidence each run after the next. The Aria MIPS is a perfect option for those who prefer to ride with their glasses on and enjoy all-day comfort. Bonus: with the Aria MIPS, there's no need to worry about goggles falling off the back of the helmet or getting lost on the mountain.

2021

# ARIA MIPS NEW

## THE ALL-IN-ONE LOOK

The Aria MIPS® shield helmet offers comfort on the mountain while boasting a futuristic look with modern performance features. You can easily pull the shield out and over the helmet and back down without any fuss—a great option for those who wear glasses. You’re also sure to appreciate the VIVID lens that’s seamlessly integrated with the helmet, MIPS Spherical technology which aids in the reduction of rotational energy during certain impacts, and Thermostat Control so you can manage the temperature within.

# GOGGLE TECH INDEX

**VIVID TECHNOLOGY WITH OPTICS BY ZEISS**  
VIVID is a patented lens technology—developed by Giro in partnership with Zeiss Optics—that improves the visual experience on snow by enhancing contrast and definition. VIVID reduces eyestrain, improves reaction time, boosts confidence, and delivers precise vision without color over saturation. VIVID Lens Technology effectively manipulates blue light by letting in contrast enhancing blue light, while blocking harmful UV light. VIVID essentially filters out the haze and frees your eyes to spot your line and focus on enjoying your riding experience.

**TORIC VIVID LENSES WITH OPTICS BY ZEISS**  
Toric in shape, this injection-molded lens mimics the form of the human eye to provide superior optics while creating increased air volume inside the goggle to help prevent fogging. Manufacturing, testing, and quality control of all Giro toric lenses is performed by ZEISS Optics and are held to the highest standard.

**CYLINDRICAL VIVID LENSES WITH OPTICS BY ZEISS**  
Manufacturing, testing and quality control of all premium injection-molded cylindrical lenses performed by ZEISS Optics, ensure optics of the highest standard. Additionally, these lenses are injection-molded, further refining optics and minimizing distortion that can occur in thermo-formed cylindrical lenses. Our full range of performance-engineered lens tints and mirror coatings help to enhance vision and every lens is protected by a durable, scratch-resistant coating.

**SNAPSHOT - MAGNETIC INTERCHANGE LENS SYSTEM**  
Our new SNAPSHOT – Lens Interchange System utilizes self-locating rare earth magnets and a secure locking mechanism for fast, on-the-fly (or on the chairlift) virtually effortless lens interchange. Upon contact with the frame, the lens simply snaps into place and then locks down securely. When the clouds roll in simply depress the shutter button, release the lens and insert the lens of your choice.

**QUICK CHANGE LENS SYSTEM**  
This elegant new lens interchange system uses self-locating magnets to assist in lightning-fast lens replacement and keep the lens securely locked in place.

**SLASH SEAL**  
The new Slash Seal lens interchange system is an easy and intuitive interface for swapping out lenses on-the-go. Simply align the lens carrier, new lens, and press the frame and lens together along the perimeter seam to seal the deal.

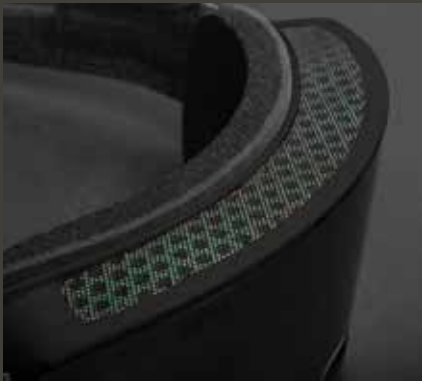

**EXPANSION VIEW TECHNOLOGY +**  
Giro set the standard when we introduced the first EXV (Expanded View) goggle. Now we're excited to introduce the next breakthrough with EXV+, which features a proprietary, semi-spherical lens curvature that allows a wider field of view than ever before.

**EXPANSION VIEW TECHNOLOGY**  
Developed and perfected at the DOME, our R&D center in Santa Cruz, California, Giro's ground-breaking Expansion View Technology (EXV) is a new frame design that creates an unparalleled field of view. We started with a helmet-compatible goggle design and then eliminated and tapered material from the frame and engineered frameless zones to optimize a massive spherical lens and yield maximum peripheral vision in our goggles.

**INJECTION MOLDED CYLINDRICAL LENSES**  
Injection molding a cylindrical lens helps refine optics and minimize distortion that can occur in thermo-formed cylindrical lenses. Our full range of performance-engineered lens tints and mirror coatings help to enhance vision and every lens is protected by a durable, scratch-resistant coating.

**EVAK VENT TECHNOLOGY**  
Found exclusively on all premium Giro goggles, EVAK Vent Technology uses a new foam made from an ultra-durable, non-absorbent material. EVAK vents minimize the chance of fogging by releasing moisture while simultaneously creating a barrier from the elements.

**INFINITY LENS DESIGN**  
The Infinity lens offers a flashy new frameless look with infinite style. The lens flows over the goggles edges, eliminating the traditional frame – resulting in a vast field of view and a thoroughly modern look.

**SEAMLESS COMPATIBILITY**  
For optimal performance of both helmets and goggles, Giro products are designed to work together, ensuring a seamless interface between helmet and goggles for an exceptional fit and dependable, worry-free function.

# HELMET TECH INDEX

**MIPS SPHERICAL**  
MIPS Spherical is a refinement and evolution of the Multi-Directional Impact Protection System (MIPS). With this sophisticated design, two layers of EPP foam fit together like a ball-and-socket. This system helps protect the brain from rotational energy by allowing up to 10- to 15- millimeters of relative motion between the helmet and head during the first milliseconds of an impact.

**MIPS EQUIPPED**  
MIPS can provide more protection in certain impacts. The main components of a MIPS-equipped helmet are: 1. The Interior Foam Liner, 2. the Low Friction Liner and 3. an elastomeric attachment system. In an angled impact, the elastomeric attachment system stretches to allow the foam liner to rotate independently around your head.

**IN FORM™ FIT SYSTEM**  
The In Form Fit System makes it easy to dial in a custom fit in seconds—even with gloves on. An ergo-friendly dial at the base of the helmet provides up to 6cm of adjustment and enhanced stability. The Vertical Tuning feature accommodates different goggles and head shapes for a custom fit free of gaper gap.

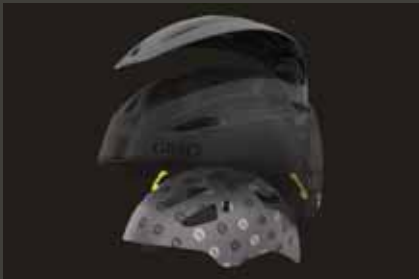

**AUTO LOC™ 2 FIT SYSTEM**  
Auto Loc 2 is a durable self-adjusting fit system designed to take the hassle out of fitting. A supple elastic fit band at the back of the helmet merges with fixed-position straps, which adjust to cradle your head when you set the system to one of the three different circumference settings.

**PASSIVE AGGRESSIVE VENTING SYSTEM**  
The discrete exterior vent design and interior channeling (including the liner and padding) combine to create optimal airflow and temperature regulation. This auto-venting technology manages airflow and temperature-motion riding, hiking, or standing static.

**CONFORM FIT TECHNOLOGY**  
The fully integrated Conform Fit System utilizes a two-piece shell that literally forms to the rider's head shape by expanding and contracting with the turn of a dial. A truly adaptive design, it features a durable yet semi-flexible EPP construction that provides the lowest-profile fit we've ever created and unsurpassed custom comfort.

**HYBRID CONSTRUCTION**  
Hybrid Construction merges a durable ventilated Hard Shell upper with an In-Mold Construction lower shell plus sidewalls for added protection and style. With Hybrid Construction the helmet is beefed up for added durability while remaining lightweight. Hybrid Construction also features an impact absorbing and lightweight EPS foam liner.

**D2 CONSTRUCTION**  
D2 Construction pairs two densities of Expanded Polypropylene (EPP) foam to manage both high- and low-energy impacts. Additionally, EPP offers impressive resilience—this crushable foam regains its shape and retains some of its protective qualities after multiple impacts.

**THERMOSTAT CONTROL™**  
Thermostat Control Adjustable Venting control allows you to custom tune airflow instantly with a simple, low profile control button on the outside of the helmet. No other system is faster or easier to adjust, and nothing is more effective at keeping you comfortable.

**STACK VENT**  
Our Stack Vent was developed based on research showing the majority of the warm air that can cause fogging exhausts from the center top vent of the goggle. Aligning the Stack Vent in the helmet with the vent of your goggles helps to keep them clear and fog free.

**FIDLOCK® MAGNETIC BUCKLE CLOSURE**  
The pinch-free, one-handed Fidlock® Magnetic Snap helmet buckle combines the advantages of two fastening concepts in a completely new way. Strong magnets make it easy to open and close, while a secure snap functionality ensures a continuous locking force.

**IN-MOLD CONSTRUCTION**  
In-Mold Construction fuses a tough polycarbonate outer shell with the helmet's impact-absorbing foam liner. The fusion process allows for better ventilation systems, making In-Mold helmets lighter and cooler than traditional helmets.

**HARD SHELL CONSTRUCTION**  
Hard Shell Construction produces great helmets at a great value. A rugged outer shell is molded and then attached to the EPS foam liner.

**IN FORM 2 FIT SYSTEM**  
The In Form 2 System is lighter and lower profile than the original, making it even easier to dial in a custom fit in seconds—even with gloves on. The updated On-the-fly Vertical Tuning feature accommodates different goggles and head shapes for a custom fit free of gaper gap.

**POLARTEC® POWER GRID™**  
Polartec® Power Grid™ features a patented grid design structure that reduces fabric weight while increasing warmth and compressibility. This grid construction enhances both wicking efficiency and breathability by generating channels of targeted touch points that absorb and diffuse moisture vapor for faster evaporation.

**POV CAMERA MOUNT INTEGRATION**  
Our integrated POV camera mounting system is stealth, secure, and super easy to operate, allowing you to instantly deploy your POV camera for filming or quickly pop it off and stash it. POV Camera Mounts are offered on the Range MIPS, Stellar MIPS, Zone MIPS, Strata MIPS and Cipher S helmets.

**GIRO AUDIO ACCESSORIES BY OUTDOOR TECH**  
The Wireless Chips™ 2.0 features one-touch controls and hands-free phone function. Featuring glove-friendly controls, 10-hour play time, full-range 40mm drivers, and proven performance down to -20°F.

Giro teamed up with the audio experts at Outdoor Tech on two rugged, in-helmet audio systems. The Wireless Chips™ 2.0 features one-touch controls and hands-free phone function. Wired Chips™ are the universal, drop-in wired model featuring glove-friendly controls. Both models offer 10-hour play time, full-range 40mm drivers and proven performance down to -20°F.

**OUTDOOR TECH X GIRO -  
WIRELESS CHIPS™ 2.0**

Wireless Chips™ 2.0 features 1-touch controls and hands-free phone function. This system also boasts full-range 40mm drivers, 10-hour play time, and proven performance down to -20°F.

- Drop the chips into the slot inside your helmet liner
- Rock out and make calls wirelessly, without taking off your helmet
