2019-2020

NITRO
SNOWBOARDS
1990 **30** 2020
YEARS

REALLY?

30 YEARS ALREADY?

Time flies – and quite honestly, Sepp and I had no idea where Nitro would be 30 years later when we started working on the first product line in 1989 and finally founded the brand in 1990. We were just stoked that snowboarding had already come this far at that point and we'd actually be running our own snowboard company.

Being able to dream up whatever board you wanted and actually seeing it come alive was the biggest thrill – and still is to this day. It may sound pathetic, but I still get stoked seeing someone using one of our products. The fact that this person has spent their hard-earned money on a piece of equipment we have designed and produced is humbling and makes me proud of our team.

We take this responsibility quite seriously and will continue to do what we did with the past 30 product lines: Turn our dreams into reality and make sure that our customers experience the same joy and excitement riding as we had designing and testing.

Have a great winter,

TOMMY DELAGO
Co-Founder/President

14 SNOWBOARDS

60 BINDINGS

88 BOOTS

120 TECH

136 BAGS

144 APPAREL

Nitro was founded by Thomas Delago and Sepp Ardel in 1990 at Vera's Cafe in Seattle, Washington. Two snowboarders who were interested in progressing their passion for being in the mountains, by creating their own products and technologies to make snowboarding more accessible for everyone.

SNOWBOARDING IS WHAT GOT US HERE

SNOWBOARDING IS WHAT GOT US HERE AND GIVING BACK TO SNOWBOARDING IS WHAT KEEPS US HERE. WE ARE DEDICATED TO DEVELOP THE BEST PRODUCTS, ACT LIKE A FAMILY, MAKE CONSCIOUS DECISIONS, AND ENCOURAGE PEOPLE TO BREAK OUT OF THEIR EVERYDAY ROUTINES AND DO SOMETHING WORTH REMEMBERING.

We take pride in supporting the retailers, community, and structure that has gotten snowboarding to where it is today, by not selling direct online. We believe it is important to share the profits with every level of the snowboard community from Local Distributions, Reps, Retailers, Shop kids, and Team Riders - these are the key people building and sustaining our local snowboard communities.

We believe this helps support the local snowboard communities to continue to thrive and get more young rippers out on the mountain, and to keep the snowboard legacy strong and bright for decades to come. Snowboarding is a multilevel community and we do our best to support these micro and macro communities through our kid's camps, Run To The Hills Events, team riders, supporting snowboard media, snowboard enthusiasts, to snowboard park sponsorships, and grassroots level sponsorships.

WHAT KEEPS US HERE

The search for new ideas, the hunt for the best product, the perfect ride, accelerating the endless patch of progression, being creative and moving fast, chasing the next evolution, living the uncertain adventure of the snowboarding industry. Also getting to ride fresh pow when others check their emails. Being part of a community that shares the same rage of enthusiasm and supportive nature is one of the most inspiring reasons to continue for another 30 years - we are all in this together!

BEST PRODUCTS

We are constantly working on making products that make it easier, more fun, affordable and enjoyable to go snowboarding, while focusing on progressing the technology and design to help the progression of snowboarding our team riders and employees demand. When you snowboard you have the freedom to go anywhere and we use this same mindset while searching for new technologies, creative designs, artwork, and developing our products.

ACT LIKE A FAMILY

Since day one, Nitro has been run like a family. Everyone of the 16 employees has equal opportunity to give their input and transparency is something we take pride in. Everyone is in this for the same reason - snowboarding. Trust and loyalty are key components to why Nitro is able to stay true to its core values of running the business like a family. We strive to treat our team riders, distributions, reps, retailers, and snowboarders with respect, loyalty and trust, because we believe snowboarding is built on friendships made on and off the mountain through a mutual respect for our local and global communities.

Team riders are some of the most important members of the Nitro family because these are the guys and girls who help us progress product, content, events, and initiatives in the right and relevant direction, which allows us to stay authentic and engaged in the ever-evolving world of snowboarding.

MAKE CONSCIOUS DECISIONS

We know that the community and environment is what allows us and our fellow snowboarders to enjoy deep pow days, early morning groomers, and lift rides or split tracks any day of the week, so we consciously question ever process to see how we can improve a sustainable future for the snowboard community. We know that building our products create pollution to our environment, so we continuously work to reduce and off-set these effects. This

philosophy does not only apply to our eco-initiative, but also to the business side - we are always looking for ways to strengthen the current snowboard retail and community landscape to make sure future generations will have the same passionate people involved in their snowboard scene as we did.

ENCOURAGE PEOPLE

Everything we do from product to content should motivate people to break out of their daily routines and go snowboarding. Through fun and user-friendly products, creative designs, authentic interactions, inspiring content, constant searching for the next ground breaking technology, and showcasing how fun and inclusive snowboarding is we are committed to get as many people doing turns as possible.

NITRO SNOWBOARDS DEALER MARKETING SUPPORT

INFOCUS PRODUCTS

Our goal is to support the snowboard retail community the best we can. One way we're doing this is by releasing a weekly "InFocus" message containing relevant snowboarding content along with assets to help support our key product stories, upcoming events, movies, and projects. This InFocus communication will support our retailers with the tools and assets they need to motivate their local community and tell the correct stories about the products they have in store.

With a snowboard product line and team as wide and deep as ours, we have realised that it is important to work closely with our fellow snowboarder enthusiasts, the shops, to let them know what key products, technologies, events, and stories we will be promoting during the season. This season we will be communicating and focusing on creating stories around the snowboards that help inspire people to go snowboarding, that are team inspired, and that motivate people to push their own limits or just try a new style of snowboarding.

QUIVER SERIES

Bryan Fox and Austin Smith continue to create and expand the fun shape collection with an inspirational purpose together with OG shaper Thomas Delago.

BEAST

Designed to motivate progression by, Kleveland, Ettala, Thorgren, and Bergrem, the world's best freestyle snowboarders.

MTN X GRIFF

TALL-mountain enthusiast Griffin Seibert is bringing back the All-Mountain snowboard movement and we are 100% behind him.

TEAM EXPOSURE

The base says it all. This board is a tribute to our upcoming team movie and all those people out there who break free from their daily routines and go snowboarding.

FATE

We want to continue to motivate as many women as possible to go snowboarding through authentic stories, team riders, and products. We make content and product for women who snowboard.

KID'S SQUASH

Finally! A fun, modern shapes also for kids! Our goal is to get more kids to the mountain, and more importantly we want to teach them the joys of turning and floating in pow!

TEAM PRO BINDINGS

The team asked for it and we built it. This will be the binding most of the team will be riding this season, so expect to see this all over the mountain in real life and through your phone.

WMNS IVY BINDINGS

The Ivy has become a staple in the women's binding world, so we will be working with our team riders to create projects that help motivate more women to experience the Ivy comfort and enjoy longer days on the mountain.

CAPITAL TLS BOOTS

After our team trip to Lofoten, Norway last season while filming for our new movie, the team riders and our development team demanded a new high-end versatile boot that was equipped for long distance summits and hold its own in the big park. This will be the go-to boot for most of the team from Marcus Kleveland to TM Splitboarding enthusiast Knut Eliassen.

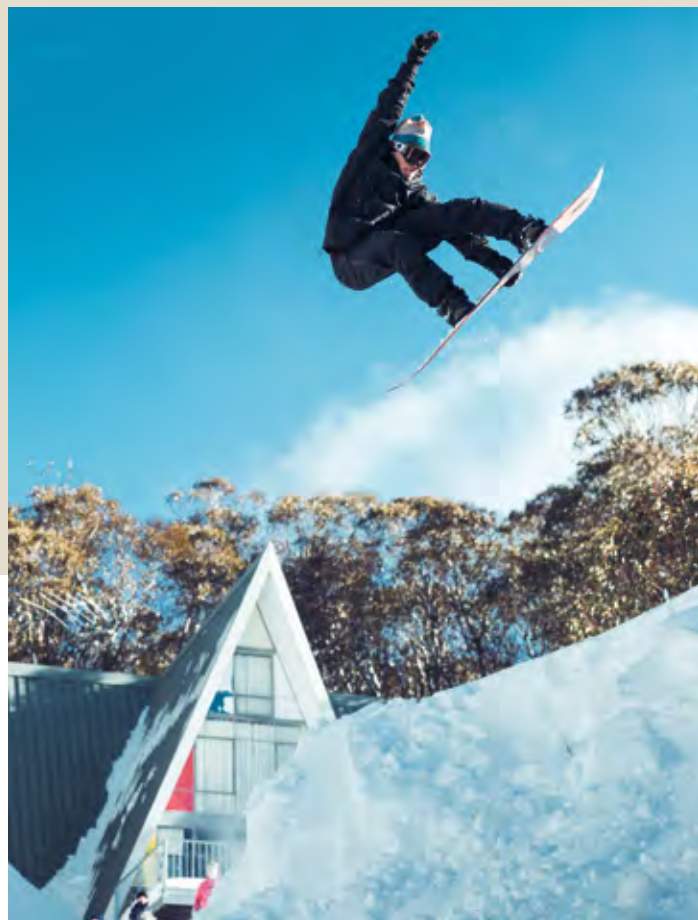

NEW WOMEN'S BIANCA TLS BOOTS

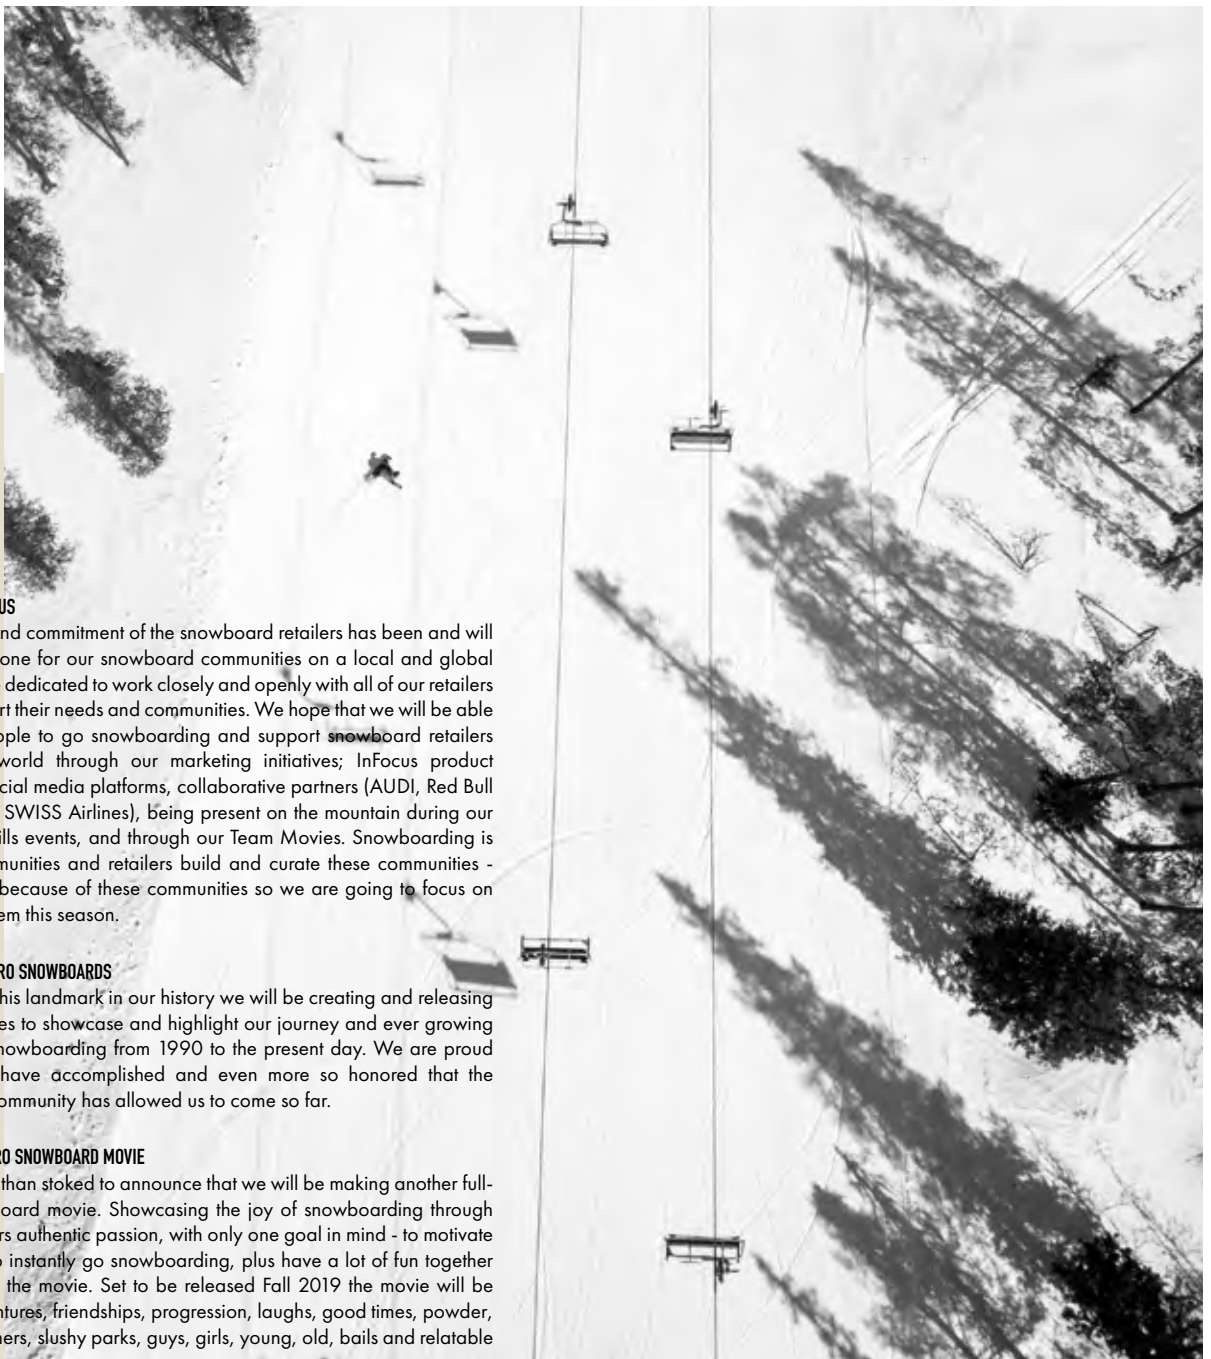

When the women on the team ask for a more comfortable boot, we listened because we know they are the ones out there standing in the snow day after day no matter the temps searching for the next hit, slash, or line. We have packed all of our R&D resources and technologies into this new boot to help women stay out longer and be more comfortable.

INFOCUS MEN & WOMEN TECHNOLOGIES

Over the last 30 years we have created a lot of industry standards within the board, boot, and binding technologies, and we are proud to communicate our favorite features that help snowboarders of any skill level have a better day on the mountain.

Boards	Construction, Shapes, and Railkiller Edges
Bindings	Fit, Mini Discs, Air Dampening, Cable Reinforced Connectors
Boot	Fit, Vibram Outsoles, TLS, Re/Lace, and now Boa

COMMUNITY FOCUS

The passion and commitment of the snowboard retailers has been and will be the backbone for our snowboard communities on a local and global scale. We are dedicated to work closely and openly with all of our retailers to help support their needs and communities. We hope that we will be able to inspire people to go snowboarding and support snowboard retailers around the world through our marketing initiatives; InFocus product assets, our social media platforms, collaborative partners (AUDI, Red Bull Mediahouse, SWISS Airlines), being present on the mountain during our Run To The Hills events, and through our Team Movies. Snowboarding is built on communities and retailers build and curate these communities - Nitro is here because of these communities so we are going to focus on supporting them this season.

30 YEARS OF NITRO SNOWBOARDS

To celebrate this landmark in our history we will be creating and releasing heritage pieces to showcase and highlight our journey and ever growing passion for snowboarding from 1990 to the present day. We are proud of what we have accomplished and even more so honored that the snowboard community has allowed us to come so far.

OFFLINE - A NITRO SNOWBOARD MOVIE

We are more than stoked to announce that we will be making another full-length snowboard movie. Showcasing the joy of snowboarding through our team riders authentic passion, with only one goal in mind - to motivate the viewers to instantly go snowboarding, plus have a lot of fun together while making the movie. Set to be released Fall 2019 the movie will be built on adventures, friendships, progression, laughs, good times, powder, streets, groomers, slushy parks, guys, girls, young, old, bails and relatable snowboarding.

RUN TO THE HILLS - TURNING & BURNING EVENTS

Our goal is to get more people to escape their daily lives and up on the mountain to do something worth remembering. This year the Run To The Hills movement is teaming up with our Carver Crüe product initiative which means we will be organizing, promoting, and hosting a new grassroots style carving event worldwide. This is worldwide event is only possible through the help of our 30+ distributors and their local retailers. In an effort to help support the local snowboard communities, we will be on the mountain, creating videos, creating content, and spreading the good times of snowboarding through our social media channels all season long. The idea is simple get low and go fast!

PRODUCT VIDEOS

In an effort to create a tool that helps our retailers on multiple levels we will be making a new season of in depth product videos of every hardgoods product. These videos will be posted online and also available for any retailer to use on their channels. The reason for these videos is simple to help strengthen the knowledge and help our retailers equip the right gear on their local snowboarders.

QUIVER FIRETRUCK

We are forever inspired by team rider Austin Smith, and this season he will be traveling the Western part of North America in his customized "tiny home" Firetruck. Austin and his Firetruck will be a traveling Quiver Demo

centre, snowboard dream station, and to the core motivator to get people to Run To The Hills - we are proud to be supporting Austin with this project and will be collaborating with his firetruck initiative for seasons to come.

FREE OF RIGHTS PHOTO VIDEO CONTENT

The Nitro free of rights photo and video library (www.nitro-marketing.com) is our content portal where we have hundreds of photos, videos, and content for our retailers to use as they wish to help them promote their Nitro products, but more importantly inspire their local snowboard community to go snowboarding.

ORGANIZING LOCAL EVENTS WORLDWIDE

RUN TO THE HILLS

THANK YOU SNOWBOARDING

We owe everything we have done in the past and what we plan on doing in the future to the community of snowboarders all around the globe. Snowboarding would be nothing without the passion and community created by all of the local snowboarders, shop owners, resorts, weekend warriors, and everyone who has ever dared to stand sideways. We have always and will continue to create events around the world that bring snowboarders together, because everyone knows its more fun to ride with friends. Creating events and content that bring snowboarders together either on the mountain or through your phone is a way for us to give back to snowboarding and everyone involved.

Whether you want to join us this winter on the mountain at one of our Good Times Camps, learn tricks at one of our Nitro Sponsored Snowboard parks, or by just joining one of our online community we will try our best to keep motivating and contributing to the snowboard community. Join us this winter and Run To The Hills!

RUN TO THE HILLS

What are you waiting for? Join us this winter and make an effort to drop the boring day to day tasks and run to the hills to create memories that are worth remembering. In an effort to create a movement to get people up on the mountain and go snowboarding we will be hosting Run To The Hills events at local mountains around the globe to help bring the snowboard community together and rip some turns. Every event will be different, but the concept is the same - bring snowboarders together to ride, chill, good times and strengthen the community.

Join us this winter for some good times on a mountain near you, and hopefully learn a new trick, make a new friend, spray a ski patrol, or try some new shapes!

OFFLINE

a nitro snowboard movie

Hyped!, The Bad Seeds, Boom, 28 Winters, and now we are proud to announce we are currently in the making of our next NITRO TEAM MOVIE. A full length featured film that showcases the break snowboarding provides from today's fast pace reality. Together with our world-class Snowboard Team and other snowboard enthusiasts we will showcase the joy and freedom snowboarding provides no matter what the snow is like - through the classic Nitro Team Movie vibe full of adventures, comedy, amazing tricks, friendships, and motivating snowboarding. A snowboard movie that is interesting and inspiring to the core, the regular, and the non-snowboarders. This film will challenge the conventional snowboard film format and set out to inspire people to go out and do something worth remembering - through snowboarding.

BOARDS

SEASON 19/20

NITRO SNOWBOARDS ISLAND STYLE

WRITTEN/PHOTOS BY LORENZ HOLDER

My name is Lorenz Holder and I'm a snowboard photographer from Munich, Germany. Over the years, my job has allowed me to travel the world and experience a lot different countries with and without snow.

Last September, I was asked to travel to Taiwan to see and experience what the term "Made in Taiwan" actually means, and where and how Nitro Snowboards are made.

I was more than stoked to be able to travel to this country, because it's a bit uncommon for a snowboard photographer to go to a climate zone where you have rainforests and super warm temperatures. On the other hand, I was a bit skeptical, because I had never been to a manufacturing facility in Asia and with what you sometimes hear in the media, I was not sure what to expect.

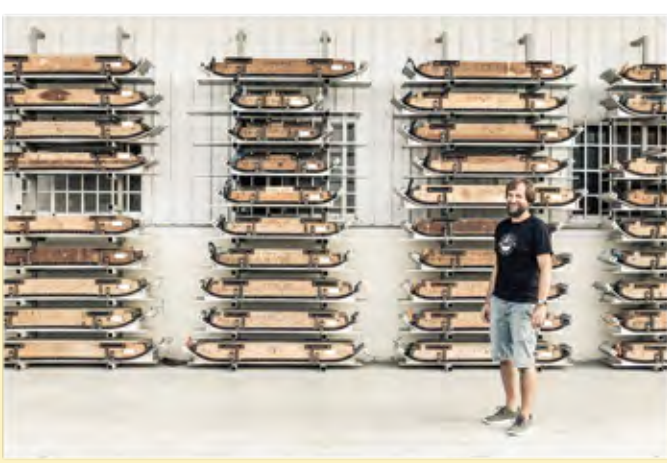

I received my plane ticket and the destination was "Taichung-Ching Chuang Kang Airport". Wow! I've never really heard a name like that before and I saw myself already flying into a city full of factories, dirty air and pollution, because Wikipedia informed me that this city is one of the biggest industrial areas in Taiwan.

So there I was – just landed in Taichung-Ching Chuang Kang. I was literally absorbing everything in from my car window view during the 30-minute drive

to the hotel. I was really impressed – the city looked more like an international metropole with nice boulevards, restaurants and theaters. Nothing like the stereotypical eastern manufacturing city I was expecting. Over the next few days this realization really manifested in my mind: Taiwan is a diverse and beautiful country!

Why was I here again? Yes – I wanted to see where and how Nitro Snowboards are made.

The next morning, Tommy and I drove to the factory which is located in the countryside about an hour outside of the city. The owner gave me a factory tour and Tommy explained the dozens of steps needed to produce a snowboard. I was impressed by how much manual work goes into each board and by the positive atmosphere in the factory. Quite amazing to see boards built while outside bananas are growing on the trees!

Since Tommy had to get some work done with the various departments, I used the time to stroll around the buildings alone and explore with my camera – I hadn't expected this was possible, but the management and workers had no objections and I was greeted with smiles everywhere.

I spent two days in the factory and witnessed every step of how a snowboard is built: from the first wood selection to the final boxing and shipping. It was a cool thing to see Quivers, Teams and other boards in the making and how closely Tommy and his team interacts with managers and workers to make sure everything is built the right way.

The second day of our stay ended in a big Moon Festival party, one of the bigger social events of the year. The factory provided free food and drinks for all employees and their families and all suppliers came to join the party. There was a huge Karaoke truck with PA and lighting equipment and the owner, managers and even Tommy had to perform a few songs for the workers. Lots of good Times and drinks that night!

For the weekend, Tommy and I took the train to the east coast to see some more of the countryside. The ride was just breathtaking, since Taiwan has a big mountain range running from north to south with over 100 peaks above 3,000 m. We were also hoping to find surf and got lucky for the two days we spent there. How cool is that – developing new snowboards during the week and going for a couple of surf sessions on the weekend...

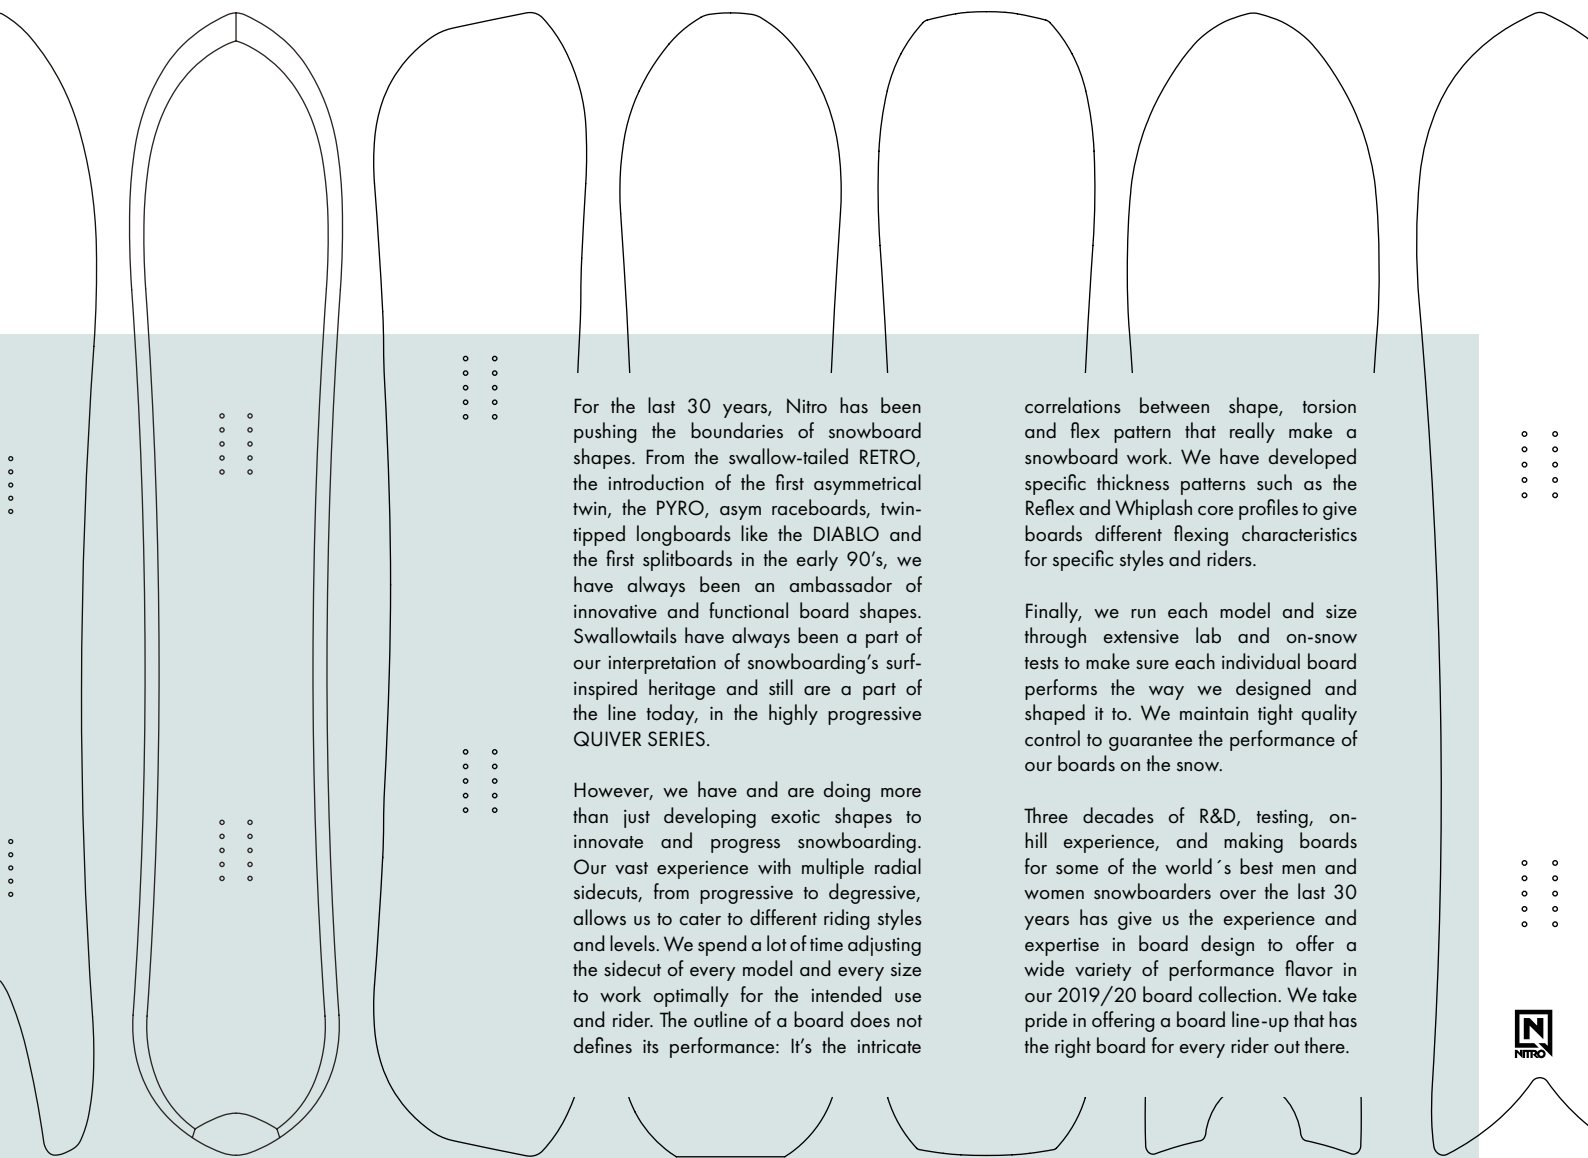

So if you ever get the chance to go to Taiwan, do it without any hesitation. And note to myself: "Get rid of your stereotypes!" - Lorenz Holder

SHAPEOLOGY

SINCE 1990

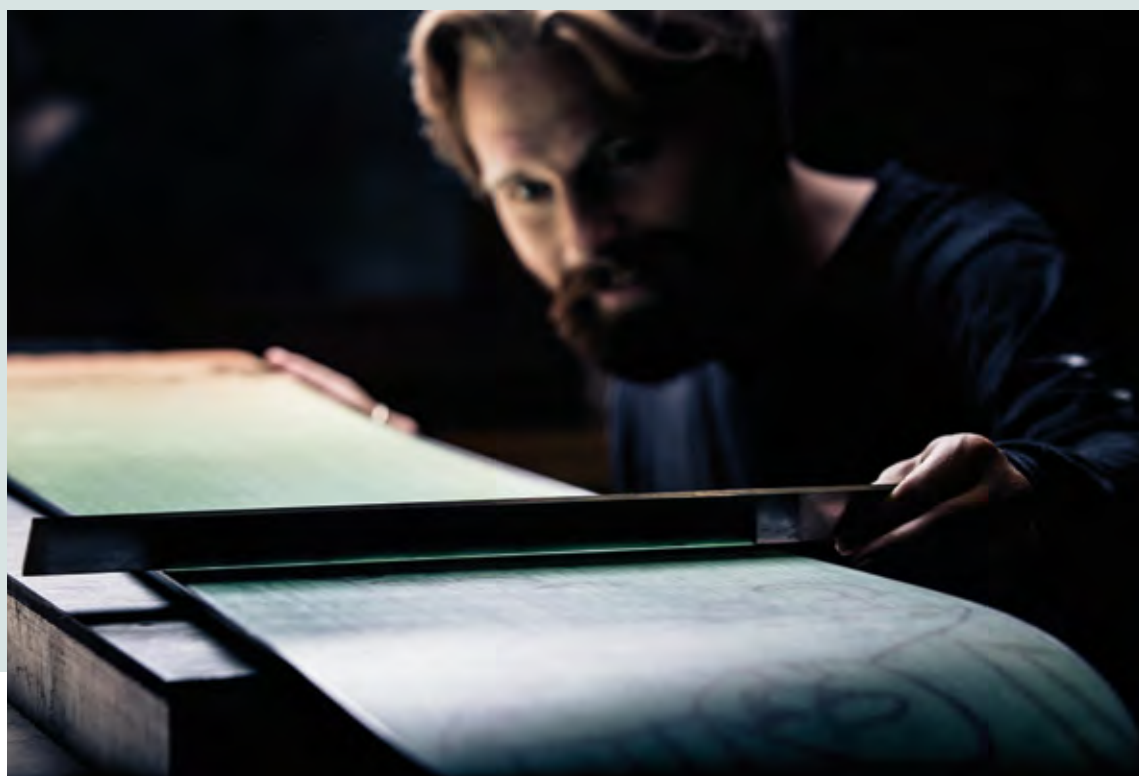

For the last 30 years, Nitro has been pushing the boundaries of snowboard shapes. From the swallow-tailed RETRO, the introduction of the first asymmetrical twin, the PYRO, asym raceboards, twin-tipped longboards like the DIABLO and the first splitboards in the early 90's, we have always been an ambassador of innovative and functional board shapes. Swallowtails have always been a part of our interpretation of snowboarding's surf-inspired heritage and still are a part of the line today, in the highly progressive QUIVER SERIES.

However, we have and are doing more than just developing exotic shapes to innovate and progress snowboarding. Our vast experience with multiple radial sidecuts, from progressive to degressive, allows us to cater to different riding styles and levels. We spend a lot of time adjusting the sidecut of every model and every size to work optimally for the intended use and rider. The outline of a board does not define its performance: It's the intricate

correlations between shape, torsion and flex pattern that really make a snowboard work. We have developed specific thickness patterns such as the Reflex and Whiplash core profiles to give boards different flexing characteristics for specific styles and riders.

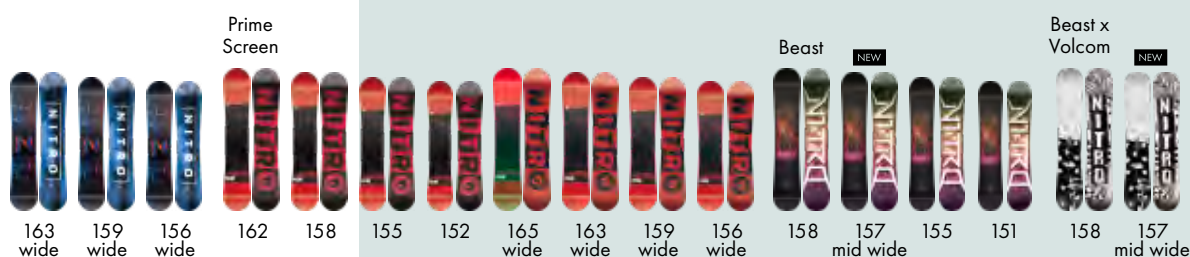

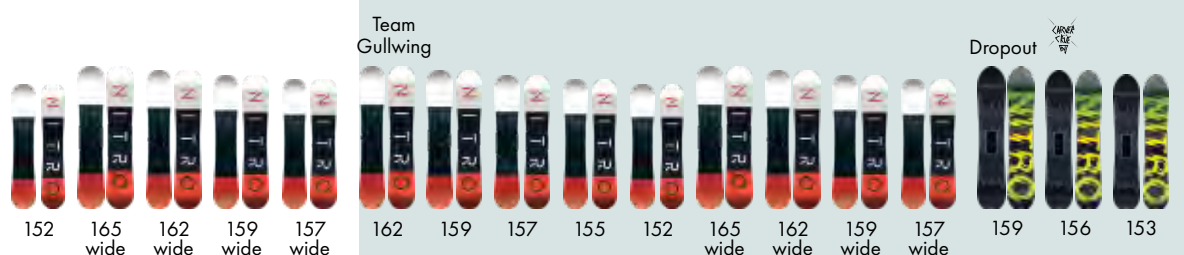

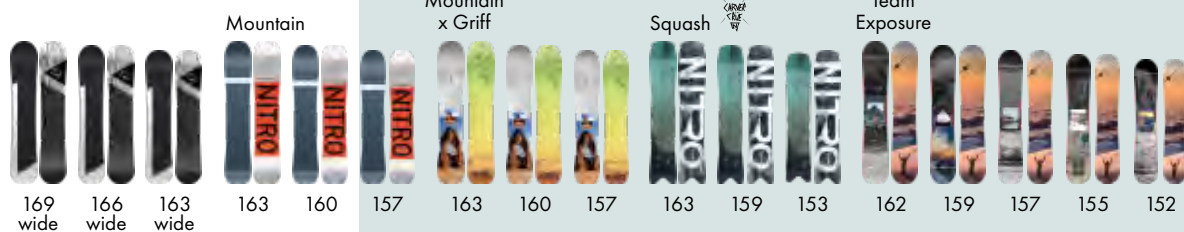

Finally, we run each model and size through extensive lab and on-snow tests to make sure each individual board performs the way we designed and shaped it to. We maintain tight quality control to guarantee the performance of our boards on the snow.

Three decades of R&D, testing, on-hill experience, and making boards for some of the world's best men and women snowboarders over the last 30 years has given us the experience and expertise in board design to offer a wide variety of performance flavor in our 2019/20 board collection. We take pride in offering a board line-up that has the right board for every rider out there.

MEN'S BOARDS

QUIVER SERIES

BY BRYAN & AUSTIN

Functional unique shapes to provide you with a better experience for those powder days at home, early morning groomers, banked slalom events, or just ripping the backside of your favorite mountain destination. The seventh season of the Nitro Quiver Series is one for the books with new sizes and models: the 203cm Quiver Cannon, the Banker, and the FinTwins. Tommy Delago, founder of Nitro snowboards teamed up with Bryan Fox & Austin Smith once again to shake things up - They decided to create a Quiver Series that offers a board shape, flex, sidecut for every fun type of snowboarding, while they all tie together with a simple graphic concept created

by Bryan Fox and Austin Smith to allow you to keep these boards in your own personal quiver for years to come. The purpose and goal of the Quiver series is to provide a more fun and exciting ride during a powder day, banked slalom event, or any other day than the ride your standard all-mountain or freestyle board can offer. Snowboarding is all about having fun and that is exactly what the Quiver series has been about since day one.

CARVING HAS NEVER BEEN BETTER!

The Nitro Woodcarver was designed by the people at Nitro who like to turn & burn and ride pow. The seamless combination of Nitro's Power Pods and a deep Dual Degressive sidecut that allows you to turn with ease and power at the same time, from big open turns to quick technical maneuvers. A board designed by Nitro Founder Tommy Delago to help any rider enjoy and excel at one of the most fun things about snowboarding - carving, while the Directional Freeriding shape allows you to rally and float through the deepest of pow days. This year we have teamed up with Deejo, a manufacturer of beautiful knives, to put a focus on the simplicity and beauty of carving the snow or wood. Everyone who purchases the Nitro Deejo x Woodcarver snowboard and Team binding will receive a custom Deejo x Nitro knife*. The Woodcarver is literally built for carving all day long no matter the snow condition!

THE OFFICIAL ATV IS HERE!

The brand new SANTOKU snowboard is the ultimate utility knife, prepared for any condition or terrain you throw at it. Built together with snowboarding ATV (All Terrain Vehicle) Elias Elhardt to be the perfect snowboard to turn the entire mountain into a personal playground, with its All-Terrain Twin shape and elongated tip and tail allowing for more float in the pow and longer butters on the groomers.

The combination of good ol' fashion True Camber and the new carbon reinforcement fiber Diamond V-Tips in the tip and tail, provides the pop and response you need for kicking out methods and flying down first decents at record speeds. When you're on the groomers the Dual Degressive Sidecut and Whiplash Core Profile will allow you to carve it up like it's your day job!

NITRO x GRIF

LOSE YOURSELF IN THE MOUNTAINS

Long time Nitro Team rider, Geologist, Mountain Adventurer, Tweaker, and Artist Griffin Seibert has been a huge fan of the Mountain Snowboard since its conception in the Quiver Series, and this season we have teamed up with him to allow him to use the Mountain Board as his canvas on and off the snow!

"I Love the Mountain Board, for me it is the board I can take into any situation and it always handles. At home in Utah I always have a tough time finding a board I can ride that rips everything the Mountain can throw at me whether that be powder fields, steep trees, cliff drops, sidehits, or perfectly manicured groomers, and for me the Mountain Board is the answer I have been looking for!

This graphic is inspired by my home state of Utah. One of my favorite things about Utah is going on trips to the desert. The desert is a pretty harsh environment, but within that cruel environment lies an indescribable beauty and calmness. It is a place that calms the mind. When I lay awake at night in my sleeping bag on the desert stone, my mind begins to wander. Staring at the stars, thoughts of the universe come infiltrating into my blood stream, and I always reckoned it would be rad to meet some chill Aliens."

- Griffin Seibert

POWERCORE II

BUILT FOR TURNING & BURNING

This award winning beauty will allow you to have more fun on pow days and sunny groomer laps than any other board you have ridden before. The Squash snowboard specializes in all sorts of conditions by prioritizing float through neck deep pow and offering a perfect blend of a Progressive Sidecut and True Camber so you can lay into carves like you do it for a living.

This Tapered Swallowtail Shaped powerhouse will allow you to charge with finesse through the choppiest conditions, while the Sintered Speed Formula HD Base will allow you to get out of the flats with ease. If you are looking for a snowboard to have fun on during the deepest of days or the crappiest of days do like most of the Nitro Team does - Squash it!

TEAM EXPOSURE

RUN TO THE HILLS X LOFOTEN ADVENTURE

Last season the entire Nitro family embarked on a lifetime snowboard adventure up to the Lofoten Island range well above the Arctic Circle where the mountains literally meet the ocean on all sides, and we experienced the true beauty of snowboarding through good times and incredible terrain. The new Team Exposure series is dedicated to the message, "Run To The Hills", and through Markus Rohrbacher's images you can experience the beauty that we enjoyed on our snowboards during our trip to Lofoten everyday no matter where on planet earth you are. Hopefully when you look at the board on the shop wall, in your room, or outside the resort cafe it will inspire you to Run To The Hills and do something worth remembering!

The Team Exposure has been an iconic snowboard in our line for years with its inspirational imagery, continuous innovation, flex perfection and reliable all-mountain ride. Our TRÜE Camber offers the perfect amount of standard camber for riding with full confidence, while the Reflex Core Profile maintains a playful and yet responsive flex. If you are looking to stay motivated by the way your snowboard rides and by the images below your feet and are the type of rider who likes to rip the entire mountain from the park, halfpipe, to the steepest of lines then choose the versatility of the TEAM Exposure snowboard. Run To The Hills!

BEASTMODE BY ETTALA, KLEVELAND, THORGREN, BERGREM

When the world's most progressive freestyle snowboarders like Marcus Kleveland, Eero Ettala, Torgeir Bergrem, and Sven Thorgren set out to make a park snowboard that will take their progression to new heights, then you know you are going to get a Beast of a board that can handle anything, and go full Beastmode! This Twin Shaped, TRUE Cambered freestyle mastery offers the support and precision that is needed for world-class features and tricks.

The combination of Railkiller Edges, Diamond Band, and Ballistic Impact Panels create a snowboard that is basically indestructible, while the Sintered Speed Formula II Base keeps you hauling ass all day long! After huge demand we are offering a Mid-Wide 157 version of this board as well, for more float in the pow and for those with a bigger foot. Built for progression, stability, pro-caliber performance, and durability... To go full Beastmode!

STONED PROGRESSION

We are stoked to announce that we are continuing our collaboration with Volcom. We admire the history, passion, and dedication Volcom has for the snowboard communities around the world and through our team riders Marcus Kleveland and Torgeir Bergrem we are proud to have created the BEAST x Volcom Collaboration deck.

After huge demand we are offering a Mid-Wide 157 version of this board as well, for more float in the pow and for those with a bigger foot. Built for progression, stability, pro-caliber performance, and durability... To go full stoned beast mode!

TRIPPY PARK PERFORMANCE

We are proud to introduce the newest freestyle snowboard to our ever-evolving snowboard line, the Cheap Thrills. Design and engineered to be the most versatile medium flexing park board on the mountain, with its Flat-Out Rocker allowing for a trick-oriented ride, while the Whiplash Core Profile provides the stability and snap needed for sending it from feature to feature. The Railkiller Edges are twice as thick and twice as strong as a standard edge allowing you to go even harder in the park without worrying about your edges, and the Premium Extruded FH Base is durable, fast and easy to maintain.

The Cheap Thrills trippy and colorful graphic direction sparked a collaboration with the world-renowned art supplies brand Faber-Castell, which resulted in each board **coming with a free set of four high-quality Faber-Castell neon colored marker pens and black and white mini poster with the Cheap Thrills graphic**, so you can get trippy and color your own version. We also offer more color-in posters to be downloaded for free from our website www.nitrousa.com/CheapThrills. Together with Faber-Castell you can let your imagination run wild in the park or in-between shred sessions - let the new thrills begin on a brand new progression friendly park deck!

BINDINGS

SEASON 19/20

BINDING

DEVELOPMENT

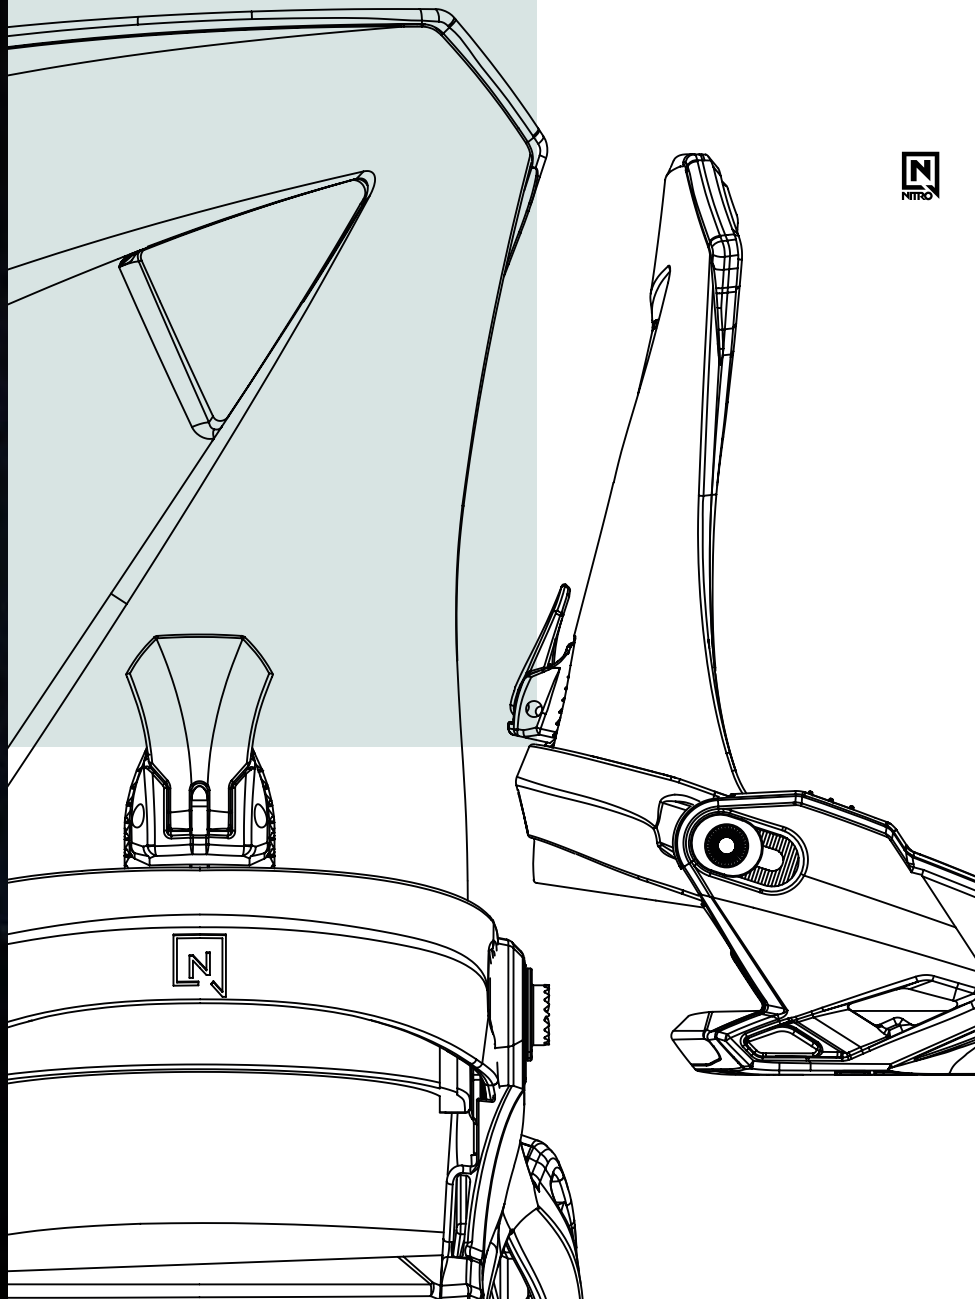

For over 30 years, Nitro has been pioneering the sport and building product that set the standard, like 3-piece bindings with adjustable heelcups to customize your fit and position on the board, like cable ratchets and connectors, like the mini disk or air dampening. Nitro supports a strong team of riders worldwide, ambassadors to our brand and our sport, testing our product every day of the year and helping to make it better every season. As a brand, Nitro promotes the fun aspects of our sport and fuels everyone's passion and longing to just go out and ride.

We have supported shops and riders and are respected for our service and commitment. These are all things that matter and are reflected in the way we build and present our products.

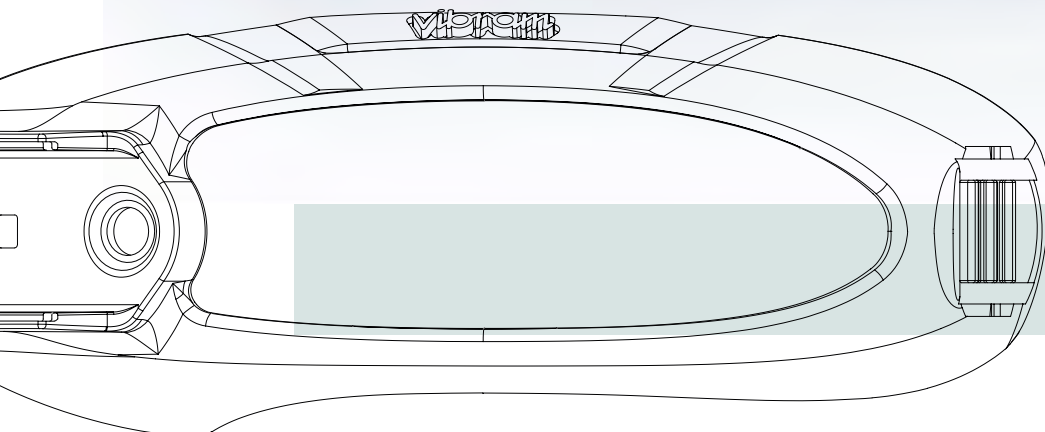

FLORIAN LANG

Product Manager Bindings

BINDING

TECH SPOTLIGHT

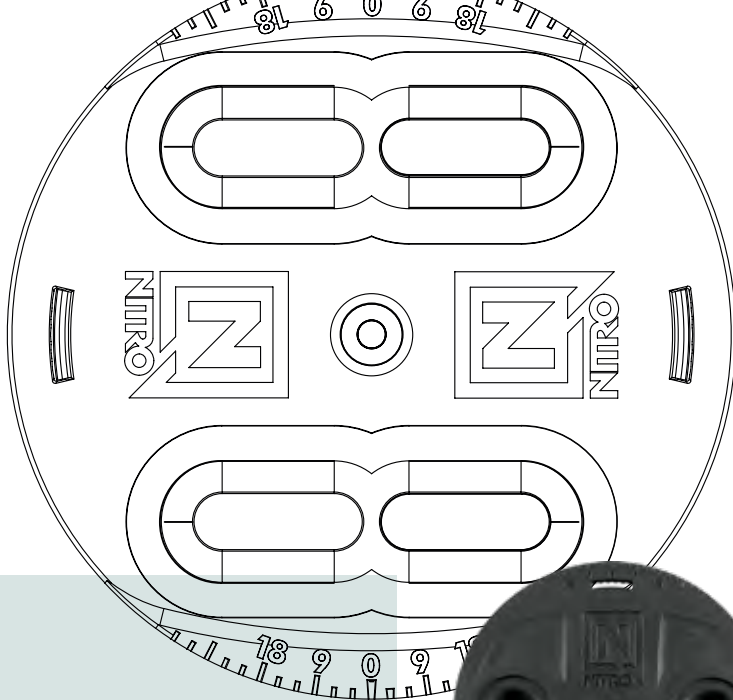

ÜBERGRIP TOE STRAP by Vibram®

Co-developed with VIBRAM®, known for their high performance rubber outsoles, we designed a toe strap that combines the shape and feel of our B.E.S.T. Convertible toe strap concept with the sticky Xstrek rubber from VIBRAM®. The strap adapts to any boots toe box shape while the rubber keeps the strap in place, no matter how hard you stomp your landing, whether it's wet or freezing.

2x4 MINI DISC

Evolution at its peak! Smaller foot print and less impact on the boards natural flex, Nitro's mini disc sets the standard in disc functionality. The new snap feature lets you choose and lock in your binding angle before you mount your bindings - set it once, never lose it again!

Channel compatible disc available

STANDARD DISC SIZE

BINDING

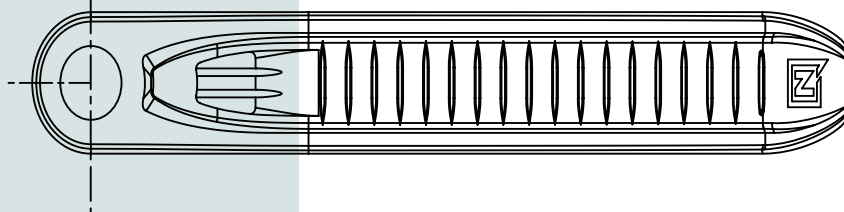

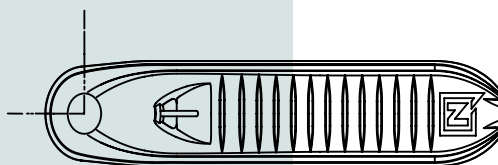

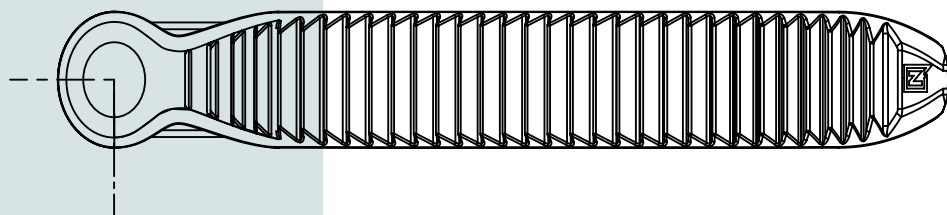

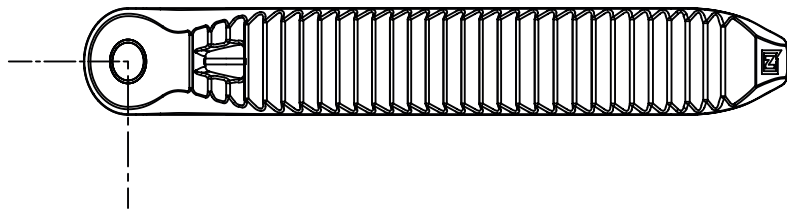

TECH SPOTLIGHT

AIR DAMPENING

The lightest shock absorbing technology on the planet sucks up hard landings and keeps your heels from getting bruised. This noticeable difference in ride and comfort does not sacrifice any response and control.

AIR
DAMPENING

REINFORCED RATCHETS AND CONNECTORS

Over-molded stainless steel cables inside of the ratchets and connector straps – no more stretch, no more breaks.

TECH SPOTLIGHT

INTERNAL ANKLE SUPPORT

An anatomically shaped molded plate distributes lace pressure over the instep/ankle area: More comfort and a better, more precise fit.

TLS 5 TWIN LACING SYSTEM

Nitro leading the pack with the TLS 5 lacing system: Easy lace engagement and release, combined with the low abrasion of our Dyneema® laces are the key factors of this highly reliable zonal lacing system. At the same time, the TLS 5 features compact size and low weight while maintaining the reliability proven by tens of thousands of days on the mountain. Even though rarely needed, servicing and replacement of all parts including the lace is easier than with any other system on the market. Even using a standard lace if you're in a pinch is an option only available on Nitro's TLS boots. Easy-entry handle storage pockets as well as our Bail Out system for an easier entry and exit round off the most developed dual lacing system on the market.

MOLDED TOE CAP

Precision-molded to fit our last perfectly, our molded toe cap provides more toe space and protection from toe straps worn over the tip.

BOOTS

TECH SPOTLIGHT

BOA®

NEW BOA® DUAL ZONE FIT SYSTEM

The dual top and bottom zonal Boa® Fit System offers zonal adjustments for the bottom section via the Boa® dial on the side of the boot, and the top section from the Boa® dial on the tongue of the boot. This zonal fit solution allows for a connected, fast, customized and durable fit, without sacrificing a tailored foothold. The system quickly loosens by pulling or tightens with pushing and turning the Boa® dials. Boa® is a registered trademark of Boa Technology Inc.

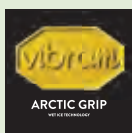

THERM-IC

THERM-IC® HEATED LINER

Say good-bye to cold feet! THERM-IC® is the premier brand for innovative heating solutions and selected Nitro liners are equipped with the THERM-IC® boot warming technology. Just add a genuine THERM-IC® powerpack (C-Pack, sold separately), plug in and enjoy warm feet all day long.

VIBRAM® OUTSOLE powered by Vibram® ARCTIC GRIP™ TECHNOLOGY

The Vibram® Arctic Grip™ technology compliments the outstanding performance of Vibram® Ictrek™ compound and extends it to wet ice surfaces. Vibram® Arctic Grip™ is made from a unique polymer blend, coupled with an advanced filler system and a new processing technique. The result is the most advanced cold weather gripping system ever created by Vibram.

TECH

SEASON 19/20

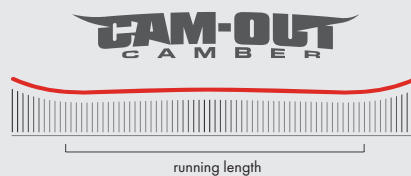

CAMBER LINES

In today's world there are so many different names, classifications, and marketing schemes out there that are used to hype up the camber design, most of them don't even function in a way that will help people become better snowboarders. We have decided to cut the crap and keep snowboarding simple by simplifying our camber names and technologies to only those that work, and that are approved by our regional and global team riders, and friends. That is why we have chosen to offer the four camber profiles that really work, and we are not overcomplicating things by micro-slicing and renaming them – Even though all of our camber profiles are adjusted to match the type of person or terrain the boards are designed for, but TRUE camber is camber, Gullwing is Gullwing, Flat-Out is Flat-Out, and Cam-Out is Cam-Out. Real camber technology that works and does not need a marketing scheme to prove it.

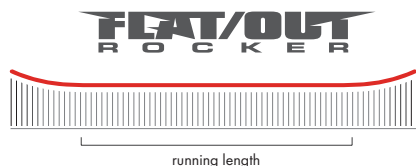

TRUE CAMBER

TRUE CAMBER is good old standard camber, which provides the stability, and pop many shreds can't live without. The amount of snap and support you get from a cambered board is unrivalled by any other camber design. Our TRUE CAMBER varies between board models because each board is specifically designed for a certain terrain or type of riding, for example the TRUE CAMBER in our Pantera has a larger height for maximum response, while the TRUE CAMBER in our freestyle boards are lower to provide you with a more freestyle friendly flex, without losing the support and trust you need for stomping landings. Camber is Camber there is no point in over complicating it!

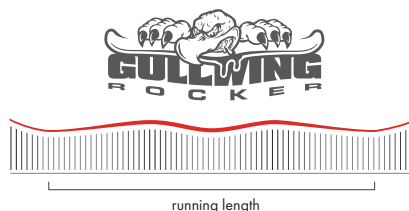

CAM-OUT CAMBER

Our CAM-OUT Camber is basically a TRUE Camber with early and smooth transitions into tip and tail. The result is a fun and responsive board that turns on the spot and is forgiving, even after that 713.5° landing!

FLAT-OUT ROCKER

Our FLAT-OUT ROCKER is a hybrid flat camber profile where the nose and tail lift off before the traditional contact points, providing effortless turns, and catch-free maneuvers. The lifted nose and tail provide excellent float, pressability, and forgiveness in any terrain. The ultimate hybrid between Zero Camber and Reverse Camber to allow you to have the most playful yet stable ride for easy progression and all-mountain domination. The profile of choice for park, freestyle, and urban riders worldwide.

GULLWING ROCKER

A hybrid camber/rocker profile in a league of its own, GULLWING ROCKER offers the best of both worlds for the all-mountain destroyer. The positive camber under each foot supplies riders with the response they know and love while the reverse camber profile in the center allows you to experience unparalleled float in the powder, as well as pressability in the park. This do-it-all design allows you to have a quiver of one and ride the whole mountain like a terrain park.

CORE PROFILES

REFLEX CORE PROFILE: ENHANCED PROFILE CONTROL

A thinner core profile between your feet improves handling and increases torsional flex, allowing you to steer your board through a turn with ease.

WHIPLASH CORE PROFILE: MAXIMUM OLLIE POWER

This profile features reduced thickness between the inserts with added meat outside your feet for maximum ollie power, while maintaining a perfect press flex.

FLEX PROFILES

The third component in a board's performance is flex. Softer boards are easier turning, stiffer ones better for higher speeds. But it's the combination with camber and sidecut that makes a board magic – or trash. And don't be fooled: Hand flexing a board in the shop may give you a first hint, but it takes a lot of experience to make a correct judgement of a board's performance by flexing it in the shop. You can trust us to design each board flex to be the right fit for that particular board's shape, camber and purpose.

URBAN: SMOOTH AND LOOSE

These ultra-flexible boards can be tweaked any way you like, from rails to butter tricks, and they won't wash out on you.

ALL TERRAIN: ALL MOUNTAIN POP

Our most versatile flex pattern, combining Nitro's signature pop with smooth response, allowing you to tear up the entire mountain.

PARK: TUNED FOR PROGRESSION

Specifically tuned for park riding, this flex pattern is forgiving yet responsive; allowing you to take your riding to the next level on jumps and rails.

MOUNTAIN: SPEED AND POWER

With maximum response and drive for fast, all-mountain riding, this snappy flex pattern creates powerful boards for powerful riders.

SIDECUTS

Sidecuts are as important to a board's performance as flex and camber/rocker lines. A sidecut defines how a board turns, carves and holds an edge. But, it's the combination of all the features that make a board work well for its designed purpose. We at Nitro have pioneered most of today's common sidecut geometries and have access to over 25 years of experience of fine-tuning each individual board model. Therefore, we have also simplified the tech jungle for you. You can get a first taste of what the shapes will feel like, but you can leave it up to our engineers to make each board just right for you!

PROGRESSIVE SIDECUT

A larger radius in the front, blended into a tighter one towards the tail: The progressive sidecut makes accelerating out of turns a breeze, while maintaining a catch-free nose area.

RADIAL SIDECUT

The simplest and most common of all sidecuts: One single radius makes this sidecut extremely versatile and predictable.

DUAL DEGRESSIVE SIDECUT

This sidecut blends a smaller radius in the center with two larger ones in the tip and tail, making it loose and playful. The most forgiving of our sidecuts.

BASE MATERIALS

PREMIUM EXTRUDED FH BASE: EASY AND VERSATILE

Durability, speed and low maintenance all in one ultra-clear base material - our FH Base takes the abuse of rail and urban riding like no other.

SINTERED SPEED FORMULA II: FASTEST AND DURABLE

Rocket science put to work! A nanotech wax formula deeply infused into our sintered base material makes the base surface lightning fast in all snow conditions. Highly tuned yet extremely durable, SPEED FORMULA II Base technology is exclusively featured on Nitro high-end boards.

SINTERED SPEED FORMULA BASE: HIGH DENSITY - HIGH DURABILITY

Utilizing a new base material compound, we have been able to achieve higher abrasion resistance, increased wax absorption and higher on-snow speeds.

SINTERED SPEED FORMULA II DAMAST BASE: FAST, DURABLE AND UNIQUE!

Made from the same compound as our regular SPEED FORMULA II Base, the DAMAST version fuses together two died color version for a look as sharp as your Damast steel dagger. Each board is unique, and no two bases are exactly identical.

CORES

POWERCORE: PERFORMANCE DRIVEN

Our Powercore uses tip-to-tail poplar wood, providing lightweight strength and the perfect blend of flex, response and feel.

POWER CORE II: ENHANCED PERFORMANCE AND EXTRA STRENGTH

The Powercore II is a tip-to-tail poplar wood core with additional beech wood stringers for unrivalled strength, smooth response and insane snap.

POWERLITE CORE: LIGHTWEIGHT PERFORMANCE AND POP

The highest grade of ultra-lightweight poplar wood in our Powerlite core makes for the perfect ride with lots of pop and unmatched strength at a minimum weight.

KOROYD™ CORE

The latest in core technology, utilizing co-extruded miniature tubes, vertically aligned and welded, with unique energy absorption properties, Koroyd™ is approximately 70% lighter than standard balsa wood, with no loss in strength or flex. This engineered core is utilized in the tip and tail areas of the HIGHLANDER, DOPPLEGÄNGER and VICTORIA models for reduced swing mass and overall weight.

3D Balsa Core

Our end-grain balsa core is precision machined to a 3D shape, matching the contoured top surface of the Slash board. The result is a lightweight board which is sleek looking and reinforced in the important edge and insert areas. The same core material is also used for our lightweight version of the Doppelganger split board.

LAMINATES

BI-LITE LAMINATES: FORGIVING AND STRONG

Our rider-trusted Bi-Lite Laminates are engineered for unrivalled strength, powerful style and refined board-feel.

DIAMOND LAMINATES: ULTRALIGHT AND POWERFUL

Well-balanced layers of carbon fiber establish a new level in performance. More snap and liveliness provide a smooth, powerful and effortless ride.

TRI-LITE LAMINATES: RESPONSIVE AND BALANCED

The perfect blend of flex and torsion control, Nitro tuned Tri-Lite Laminates with fibers running in 3 directions make for quick turning, highly responsive boards.

DIAMOND BAND

Carbon reinforcement fibers are ultra-strong yet lightweight. Tip-to-tail stringers transfer rider's input to help you drive your board and stay in control.

NITRO EXCLUSIVE TECH FEATURES

POWER PODS

Overlaying a tighter sidecut radius in the center of the board with a larger one towards tip and tail is creating our exclusive POWERPODS which have two amazing effects: On one hand, there is extended board width under the bindings, resulting in additional edge control, especially on hard and icy surfaces as well as simply less toe and heel drag for larger boots and flatter stance angles. On the other hand, our POWERPODS make the board super reactive and fast turning once it's put on edge – while keeping it easy to control if ridden with less dynamics.

HIKE PODS

Featured exclusively on our Doppleganger Splitboard, the Hike Pods are specifically designed to add grip under the Binding in Hiking Mode, making those icy traverses just a bit more fun.

SOFTTRIDE FLEX

A Nitro exclusive construction: Spider web-like binding raisers allow us to make sweet soft-flexing boards for young shredders while respecting all required standards for binding insert depth and pullout strength. Featured on smaller Ripper and Muse sizes.

PROGRESSIVE WIDTH

The progressive width is an exclusive feature on the Suprateam, Santoku, Cinema, SHtik and Ripper Youth. Starting out with a medium width profile at the smallest size, these boards get progressively wider as they go up in size, ensuring an ideal board-to-boot match and a perfectly balanced board for riders of every size.

RAIL KILLER EDGE

Your secret weapon for rails, rocks and longevity! With it's unique edge profile and an impact resistance of more than 200% compared to a standard edge - the Railkiller Edge is twice as thick and twice as strong. This proprietary construction can take on any rail challenge. Take a file to them or ride them hard and wear them down naturally, this chunk of steel has enough meat for years of abuse.

BALLISTIC IMPACT PANEL

Kevlar® is used in bulletproof vests and body armor to protect your core. We use it in strategic places around the binding-to-board interface to protect the construction from impacts during hard landings.

OLD! ASYMMETRICAL TWIN SHAPE

A Nitro original invention: already 25 years ago, we figured out that the body's ability to lean into a turn is different between toe- and heelside. So we designed the Asymmetrical Twin, a board that has a deeper heelside sidecut to compensate for the human body's inability to bend the knees in both ways :-). The Fury model is a modern interpretation in shape, construction and flex of the two asymmetrical twin boards offered back in the day.

BINDING TECH

SEASON 19/20

SPECIAL FEATURES

1 AIR DAMPENING

The lightest shock absorbing technology on the planet sucks up hard landings and keeps your heels from getting bruised. This noticeable difference in ride and comfort does not sacrifice any response and control.

2 2x4 MINI DISC

Evolution at its peak! Smaller foot print and less impact on the boards natural flex, Nitro's mini disk sets the standard in disk functionality. The new snap feature lets you choose and lock in your binding angle before you mount your bindings - set it once, never lose it again!

3 3° CANTED FOOTBED

Puts your knees and body in the most natural and ergonomic position on the board. Stay out longer and ride longer!

4 REINFORCED RATCHETS AND CONNECTORS

Over-molded stainless steel cables inside of the ratchets and connector straps – no more stretch, no more breaks.

5 ÜBER GRIP TOE STRAP by Vibram®

Co-developed with VIBRAM®, known for their high performance rubber outsoles, we designed a toe strap that combines the shape and feel of our B.E.S.T. Convertible toe strap concept with the sticky Xstrek rubber from VIBRAM®. The strap adapts to any boots toe box shape while the rubber keeps the strap in place, no matter how hard you stomp your landing, whether it's wet or freezing.

6 FORGED ALUMINUM SPEEDWHEEL BUCKLES

The strongest and lightest aluminium lever combined with the smoothness of a polymer Speedwheel. These buckles work like a dream and last forever- No stripping, no slipping!

7 EASY ENTRY BUCKLES AND RATCHETS

These S-curved ratchet straps stay out of your way when stepping into the binding. The wide-mouth buckle funnel helps you guide the ratchet for an ultra fast, precise bite of your buckles.

8 PREMIUM HOLD ANKLE STRAP

Welcome to the peak of comfort and control. The straps larger outline evenly distributes the power and optimizes the fit. It's built with a 35° density thermo-foam padding for maximum cushioning and a 3D molded spine for secure hold and top level response.

Featured on Machine and Poison

NITRO STRAP TECH

B.E.S.T CONVERTIBLE TOE STRAP

No matter if you like your toe strap to run over the top and in front of your boot, our toe strap fits seamless to every boot and provides you with a secure and snug fit.

PREMIUM LOCKED DOWN ANKLE STRAP

The Premium Locked Down ankle strap is designed for maximum response and control while constructed with 45° density thermo-foam for comfort, fiber-reinforced 3D spine for performance and shaped asymmetric for ultimate fit.

Featured exclusively on the Phantom Carver and Team Pro.

PREMIUM COMFORT ANKLE STRAP

Developed to offer the perfect blend of response and comfort. The 3D thermoform padding and internal 3D spine deliver response and performance while the 35° density foam adds supreme comfort.

Featured on Phantom, Team, Zero, IVY, Cosmic

PERFECT FIT ANKLE STRAP

Our most durable and trusted strap, with a slim fitting and comfortable 25° density foam, durable piping around the edges and internal 3D spine for perfect fit.

Featured on Rambler, Staxx, Charger, Rythm

FLEX WINDOWS

A large, center cut-out that makes the straps ultra-pliable and conforming to your boot shape. Coupled with the 3D molded internal frame for extra strength, this lightweight construction offers solid foothold and lasting support by eliminating all pressure points.

BOARD SAVER TECHNOLOGY

The corners on the base plate of the bindings are rounded to reduce a hard friction point where the binding and board meet. The rounded corners underneath the binding allow the board to flex more naturally around the binding base tray as well, allow for a more natural ride and less stress to the board in these areas.

BOOT TECH

SEASON 19/20

NITRO BOOTS TECH FEATURES

TLS 5 TWIN LACING SYSTEM

Nitro leading the pack with the TLS 5 lacing system: Easy lace engagement and release, combined with the low abrasion of our Dyneema® laces are the key factors of this highly reliable zonal lacing system. At the same time, the TLS 5 features compact size and low weight while maintaining the reliability proven by tens of thousands of days on the mountain. Even though rarely needed, servicing and replacement of all parts including the lace is easier than with any other system on the market. Even using a standard lace if you're in a pinch is an option only available on Nitro's TLS boots. Easy-entry handle storage pockets as well as our Bail Out system for an easier entry and exit round off the most developed dual lacing system on the market.

D3O® TECHNOLOGY

D3O® is a smart material that moves slowly and increases comfort when in a normal state, but when shock or impact is increased the materials lock together to absorb and disperse energy created upon impact, before instantly returning to its flexible state. What this means is that the material increases overall comfort of the liner by absorbing impact from deep landings or choppy snow conditions – allowing you to go faster and deeper all day!

AIR DAMPENING

Our trusted AIR suspension technology is now featured on even more models. The best shock absorbing technology on the planet sucks up hard landings and keeps your heels from getting bruised. This noticeable difference in ride and comfort does not compromise response or control.

ARMORED SHELL

To give our Select and Select Clicker® boots more support and response, we have designed an internal molded shell. This anatomically shaped and 3D molded piece wraps around heel and the lateral /medial side of the foot which increases heel fit, shell stiffness and durability.

SHELL POWER STRAP

Crank down the top of your boot with this easy-to-use feature for more power distribution and response from the top down.

FLEX LINK DESIGN

A flexible panel at the ankle between the upper and lower shell ensures an even flexing, responsive boot without bulk.

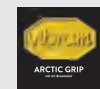

VIBRAM® OUTSOLE MADE OF ICETREK™ VIBRAM® COMPOUND

Developed to provide improved grip on icy and snow surfaces, Ictrek™ Vibram® compound allows you to hike safely in cold climates. Ictrek™ Vibram® compound will not scratch or damage interior floors or absorb liquids or dirt, while offering grip and traction on icy surfaces. Usable in all seasons, it represents the best solution for every condition encountered from the Equator to the North Pole. The softness allows the compound to adhere to smooth surfaces and to support aggressive draws to improve traction on challenging terrain. In conjunction with sole design that's utilizing small pointed lugs and a large supporting surface, Vibram® soles realized in Ictrek™ Compound provide superior cold-weather performance.

VIBRAM® OUTSOLE POWERED BY VIBRAM® ARCTIC GRIP™ TECHNOLOGY

The Vibram® Arctic Grip™ technology compliments the outstanding performance of Vibram® Ictrek™ compound and extends it to wet ice surfaces. Vibram® Arctic Grip™ is made from a unique polymer blend, coupled with an advanced filler system and a new processing technique. The result is the most advanced cold weather gripping system ever created by Vibram.

THERMINATOR SHIELD

This thermal layer between sole and liner will reflect your body heat and keep your feet warm all day.

INTERNAL ANKLE SUPPORT

An anatomically shaped molded plate distributes lace pressure over the instep/ankle area: More comfort and a better, more precise fit.

RE/LACE LINER LOCKER

Another innovation from your friendly R&D department at Nitro: The RE/LACE Liner Locker provides easy adjustability of your inner boot lacing when your boot shell is already tightened (tied), by just pulling up on the lace handle. This allows you to (re) tighten your liner and foothold throughout the day (wherever you may find yourself on the mountain) without having to untie your boot.

DLS (DIRECT LACING SYSTEM)

Directly connected to the liner, the DLS also features Dyneema® loaded low-friction laces on selected models for ultimate fit and comfort.

ILS (INTERNAL LACING SYSTEM)

Our ILS system features a lacing harness firmly connected to the boot shell. This harness snugly wraps around the liner, securing it in the shell and providing precise lacing and fit. Our engineered ILS laces provide less friction and a Dyneema® core for added strength.

MOLDED TOE CAP

Precision-molded to fit our last perfectly, our molded toe cap provides more toe space and protection from toe straps worn over the tip.

BAIL OUT SYSTEM

Designed to make unlacing the TLS system even easier. This pull tab that is placed in the middle of the TLS lacing system on the outside of the boot allows for effortless unlacing and recording breaking speeds for taking your boots off.

ORTHOLITE FOOTBEDS

Together with OrthoLite®, the World's Leading Supplier of Open-Cell Foam Insole Technology, we have developed footbeds in dual and triple density versions for different levels of support and comfort: OrthoLite® compresses less than 5% with excellent levels of shock absorption and energy return. Fit and comfort inside the boot will remain consistent for the life of the OrthoLite® product. The unique open cell structure of OrthoLite® also creates a moisture management system inside the boot by moving moisture away from the foot leaving your feet drier. When the foot is removed from the shoe any remaining moisture dries very quickly due to the airflow allowed by the open cell network in the foam. OrthoLite® contains a patented anti-microbial formulation to fight fungus, bacteria, and odor. The biocide is added during formulation so that it is linked to the foam and will not wear off or lose effectiveness over time. The Aegis anti-microbial treatment is EPA and FDA approved. OrthoLite® is extremely lightweight providing optimum performance and without adding excess weight to the boot. OrthoLite® is completely washable and will not hydrolyze. Just throw them in your washing machine and they come out like new.

POWER TONGUE STIFFENER

For those looking for adjustable stiffness throughout the day or season, you can use our removable tongue stiffener to change between premium precision or more of a relaxed feel. From the steep and deep to the groomers you can customize your boot feel perfectly for your personal style.

EVA OUTSOLE

To reduce weight even more, we are using full EVA outsoles on selected models. While keeping weight low, the EVA also provides great impact absorption and thermal insulation.

EVA MIDSOLE

Used on all boots with rubber outsoles, the EVA midsole reduce the overall weight and provides cushioning and thermal insulation.

RUBBER IMPACT PANELS

Selected EVA outsoles are reinforced with strategically placed rubber reinforcements for added resistance, traction, and durability.

BOOT TECH

SEASON 19/20

RUBBER OUTSOLE

A highly effective traction pattern, combined with an abrasion resistant high-grip rubber compound provides additional sole durability and a perfect grip, no matter if you're hiking up the park or down the stairs to the bathroom...

ARMORED SPINE

We are using an anatomically shaped and 3D molded heel reinforcement to provide even boot flex and long-lasting heel fit.

MOLDED TLS LACE HANDLES

Our molded TLS lace handles provide better grip and comfort for more lacing power.

LAZY RECOVERY FOAM

OrthoLite® Lazy Recovery Foam conforms to the foot creating a comfortable, custom fit. When you remove your foot from the boot, the Lazy foam instantly rebounds to its original shape.

X-40 HIGH REBOUND

Pushing for a foam technology with higher rebound properties, OrthoLite® developed the X-40 High Rebound formulation. This first of its kind foam boosts the elasticity rating to over 40 percent and is ideal for footwear used in high impact sports.

.11 LOW DENSITY

Developed to provide a high performance, lightweight foam option, the OrthoLite® .11 density foam is ideal for footwear products that can benefit from a resilient, drier, and healthier liner.

INTERLOCK SYSTEM

Developed to help keep the liner heel in one place and eliminate any kind of heel slippage or lifting. This ladder unit helps connect the liner heel to the shell to help generated the world's best foothold. Say goodbye to heel slipping and hello to all day comfort and foothold.

NEW FEATURES

NEW BOA® FIT SYSTEM (DUAL ZONE)

The dual top and bottom zonal Boa® Fit System offers zonal adjustments for the bottom section via the Boa® dial on the side of the boot, and the top section from the Boa® dial on the tongue of the boot. This zonal fit solution allows for a connected, fast, customized and durable fit, without sacrificing a tailored foothold. The system quickly loosens by pulling or tightens with pushing and turning the Boa® dials. Boa® is a registered trademark of Boa Technology Inc.

BOA®

NEW BOA® FIT SYSTEM (HYBRID)

This hybrid solution offers a customizable quick and standard lace solution, from the standard laces going up the shell of the boot as usual, while the Boa® Fit System (located on the side of the boot) targets the ankle area to give an easily adjustable all-day heel hold and lasting support. Boa® is a registered trademark of Boa Technology Inc.

BOA®

NEW SPINE PROTECTION (BOA® MODELS)

A flexible molded spine made of a TPR compound that is softer to allow for an even pressured lace closure and fit, while providing a medium flex and durability to the shape and spine of the boot.

NEW AUTO-POWER STRAP

An adjustable power strap located on the top part of the boot shell, that can be easily adjusted, opened and closed through a simple belt ring design. If you want a more responsive fit from the top of your boot than you tighten it, if you want a looser fit or feel than you can loosen it or remove the power-strap.

EVA MIDSOLE WITH NEW CRAMPON PROTECTION

We have designed a mid-sole that has an extra protection layer in the sensitive zones of the EVA to protect it from the impact and friction created when wearing semi-rigid crampons.

NEW HIKE 'N' RIDE CONSTRUCTION

A new construction specifically made for making the transition and performance between hike and ride mode easier and more beneficial for the rider (together with the new forward lean adjustment and auto power strap). Hike mode offers a softer flex and ride mode is a more responsive and rigid flex.

NEW ADJUSTABLE FORWARD LEAN

The customizable strap/velcro design of the boot forward lean, allows you to adjust the angle, response, and flex of the boot to allow you to interchange between a comfortable hike flex to a more responsive ride flex easily. The Adjustable Forward Lean feature is very much connected to the Auto Power Strap allowing you to blend the two features together for a smooth fit.

NITRO

SALES SUPPORT DISPLAYS

These displays are to help you showcase the Nitro Products in a premium setting and to act as a "silent sales man" by grabbing the attention of our customers . These displays can be used in stores, showrooms, and other events. Built tough to withstand the daily beating in-store displays take.
